

**Supplementary Figure S2.** Time trends of systemic treatment in 1120 women with stage I-III breast cancer by tumor size, lymph node status, grade and subtype according to age (<40, n=635, ≥40, n=485)

Un-informative cases are excluded from the analysis (systemic treatment; n=2, tumor size; n=3, grade; n=79). Only cases classified as subtype Luminal A, Luminal B and Triple-negative are included in the subtype panel (n=747). \*Endocrine treatment including ovarian suppression.
