

Supplemental Table 2

Odds ratios for death at 12-month. The model includes age, sex, WFNS grade, preadmission independence status, significant comorbidities, modified SAPS and admission year, and treating hospital was inserted as a random factor. Age and modified SAPS were included as continuous variables.

	OR	95 % CI
Age	1.05	1.04-1.06
Sex		
Male	Ref	
Female	0.64	0.54-0.76
WFNS grade		
I-III	Ref	
IV-V	6.02	4.35-8.35
Preadmission status		
Independent	Ref	
Non-independent	1.49	1.16-1.81
Comorbidity		
No	Ref	
Yes	1.32	0.95-1.83
Modified SAPS II	1.15	1.14-1.17
Admission year		
2003–2008	Ref	
2009–2014	0.77	0.59-1.00
2015-2019	0.90	0.57-1.42

OR: odds ratio, SAPS: Simplified Acute Physiology Score, WFNS: World Federation of Neurological Surgeons
