

ESM Figure 16 Tissue expression of genes containing coding variants associated with metabolic traits.

Expression levels of *CD300LG*, *COBLL1*, *MACF1*, *ACP1*, *ZFAND2B*, *GPSM1*, *PRRC2A* and *GRB14* were quantified in duplicates by TaqMan real-time PCR in a human tissue mRNA panel including pancreas, adipose tissue, skeletal muscle, liver, kidney, placenta, total brain, total small intestine, colon, aorta and leukocytes. Results are presented as mean \pm SD.
