eAppendix B. Perioperative anesthesia regimen of studies investigating intraoperative auditory interventions during general anesthesia on memory formation and patient outcome. All medication are either intravenously administered, except in the case of inhalational anesthesia administration or if otherwise stated (p.o. = per os, oral administration, i.m. = intramuscular administration).

BIS = Bispectral index; BP = Blood pressure; Clinical signs = Monitoring with standard equipment (electrocardiogram, non-invasive blood pressure, pulse oximetry); CO<sub>2</sub> = carbon dioxide; ETAG = End-tidal anesthesia gas concentration; HR = Heart rate; kg = kilogram; kPa = kilopascal; MAC = Minimum alveolar concentration; MAP = Mean arterial pressure; mcg = microgram; mg = milligram; ml = milliliter; mm = millimeter; Not applicable = No postoperative medication was given before memory formation testing; OAA/S = Observer Assessment of Alertness/Sedation Scale; O<sub>2</sub> = oxygen; PCA = patient-controlled analgesia; Surgery duration = Surgery duration in minutes, reported as mean (standard deviation) in minutes. Group 1 is noted first, followed by group 2 and other groups if applicable

eAppendix C. Detailed risk of bias summary.

Yes = Yes, low risk of bias; No = No, high risk of bias; Unclear = Unclear risk of bias; Other bias = Potential bias factors include group sex, age, BMI or weight, and duration of surgery; OR = Surgery duration not reported; BMI = BMI or weight not reported; Age = age not reported; SS = Sample size not reached
