

## Additional file 2: Figure S2

### Additional file 2: Figure S2 T cells do not take up DBP by megalin-mediated endocytosis

Flow cytometry histograms illustrating DBP-AF488 fluorescence of activated T cells incubated with 120 nM DBP or 120 nM DBP-AF488 in the absence or presence of (A) EGTA (4  $\mu$ M), (B) anti-megalin anti-body (20  $\mu$ g/ml) or (C) EGTA (4  $\mu$ M) plus anti-megalin antibody (20  $\mu$ g/ml).
