

Additional file 2. Magnitude of changes in systemic vascular resistance and cardiac index in response to upright posture. Changes in systemic vascular resistance index (A) and cardiac index (B) from the average of the 5th minute of the recording (supine) to the average of the 8th minute of the recording (upright) in the constrictor, intermediate, and sustainer phenotypes. Bar graphs depict mean and whiskers 95% confidence interval of the mean.
