

We performed this simultaneously in 4 groups (From left to right is: ctrl, Suc, HO+3867, Suc+HO-3867), In order to write the logic of the article, we separately describe in Figure 2 and Figure 3 in the article. Since some of the samples were in close proximity to the gel, we had to crop the bands, and we guarantee that the samples derive from the same experiment and that gels/blots were processed in parallel.
