Additional file 4. Agreement between variuos gene-specific PCR tests employed to detect G.vaginalis in vaginal samples

| PCR assays | Kappa value (interpretation) |  |
| :---: | :---: | :---: |
| vly PCR vs16S rRNA PCR | Kарра=0.55 (moderate) | Number of observed agreements: 83 ( $91.21 \%$ of the observations) <br> Number of agreements expected by chance: 73.1 ( $80.34 \%$ of the observations) Standard error (SE) of kappa=0.14 $95 \% \text { CI: 0.28-0.87 }$ |
| vly PCR vs cpn60 PCR | Kарра=0.44 (moderate) | Number of observed agreements: 71 (78.02\% of the observations) <br> Number of agreements expected by chance: 55.4 ( $60.92 \%$ of the observations) <br> SE of kappa $=0.09$ <br> 95\% CI: 0.26-0.62 |
| $v l y$ PCR vs 23 S rRNA PCR | $\begin{gathered} \text { Kappa=0.23 } \\ \text { (fair) } \end{gathered}$ | Number of observed agreements: 54 (59.34\% of the observations) <br> Number of agreements expected by chance: 42.9 ( $47.17 \%$ of the observations) <br> SE of kappa $=0.06$ <br> 95\%CI: 0.11-0.35 |
| 16 S rRNA PCR vs 23 S rRNA PCR | $\begin{gathered} \text { Kappa=0.15 } \\ \text { (poor) } \end{gathered}$ | Number of observed agreements: 50 ( $54.95 \%$ of the observations) <br> Number of agreements expected by chance: 42.6 ( $46.83 \%$ of the observations) <br> SE of kappa $=0.05$ <br> 95\%CI: 0.05-0.26 |
| 16 S rRNA PCR vs cpn60 PCR | $\begin{gathered} \text { Kappa= }=0.24 \\ \text { (fair) } \end{gathered}$ | Number of observed agreements: 65 ( $71.43 \%$ of the observations) <br> Number of agreements expected by chance: 56.6 ( $62.23 \%$ of the observations) <br> SE of kappa $=0.09$ <br> 95\% CI: 0.07-0.41 |
| 23S rRNA PCR vs cpn60 PCR | $\begin{gathered} \text { Kappa=0.64 } \\ \text { (good) } \end{gathered}$ | Number of observed agreements: 74 (81.32\% of the observations) <br> Number of agreements expected by chance: 44.5 ( $48.86 \%$ of the observations) <br> SE of kappa $=0.07$ <br> 95\% CI: 0.49-0.78 |
