

Fig.5 Evolution of the viral load (expressed by Log₁₀ copies per milliliters) and the absolute lymphocytes count (expressed by 10³/mm³) in **Recipient 1**

The orange horizontal line represents the inferior limit of the normal range of the absolute lymphocyte count. We can see a progressive lymphopenia while the viral load increases gradually until its peak on POD16.

POD, postoperative day

*The absolute lymphocyte count normal range (1,10-3,7x10³/mm³)
