| If doctor did not assess infant, did a doctor confirm defect(s)? | No (why not?) | | | | Yes (Doctor's name/signature/date): | | | | | NA |
| Was the baby referred? | No (why not?) | | | | Yes (who to/where to): | | | | | NA |
| General notes on completing | this form | | | | | | | | | |

Use 'X 'or ' $\sqrt{}$ ' or underline/circle a field. Ask questions about health/treatments/tests as written on the data sheet. If a woman indicates any illness, treatment or test since last ANC visit give details in the medical history/treatment/test tables on page 1.

The standard date format is dd mmm yy e.g. 12 FEB 09. If part of the date is unknown put a line. e.g. -- / ---- / 09. If a date is estimated use ± in front e.g. ± 12 FEB 09. If only an approximate knowledge of timescale is known use x days ago, x weeks ago etc. e.g. 6 months ago. Leave the duration section blank until you know it. If a medical condition or treatment is ongoing at the time of delivery please write "ongoing" in the duration box.

One line per item unless stopped and then started again. If intermittent condition/treatment, indicate this and write overall start/stop dates as above. Write in full apart from NK (not known), ND (not done), NA (not applicable).

If you find information from another source (e.g. another clinic record form, diary etc.) complete the form as fully as possible from this data. If updating the form with subsequent information, or correcting entries, neatly cross out the original and write the new. Initial/date any changes you make. For multiple births use a separate form for each baby without duplicating mother's medical history/treatment/tests
