### 1. Evaluation of weight gain between pre and 24 weeks after pregnancy

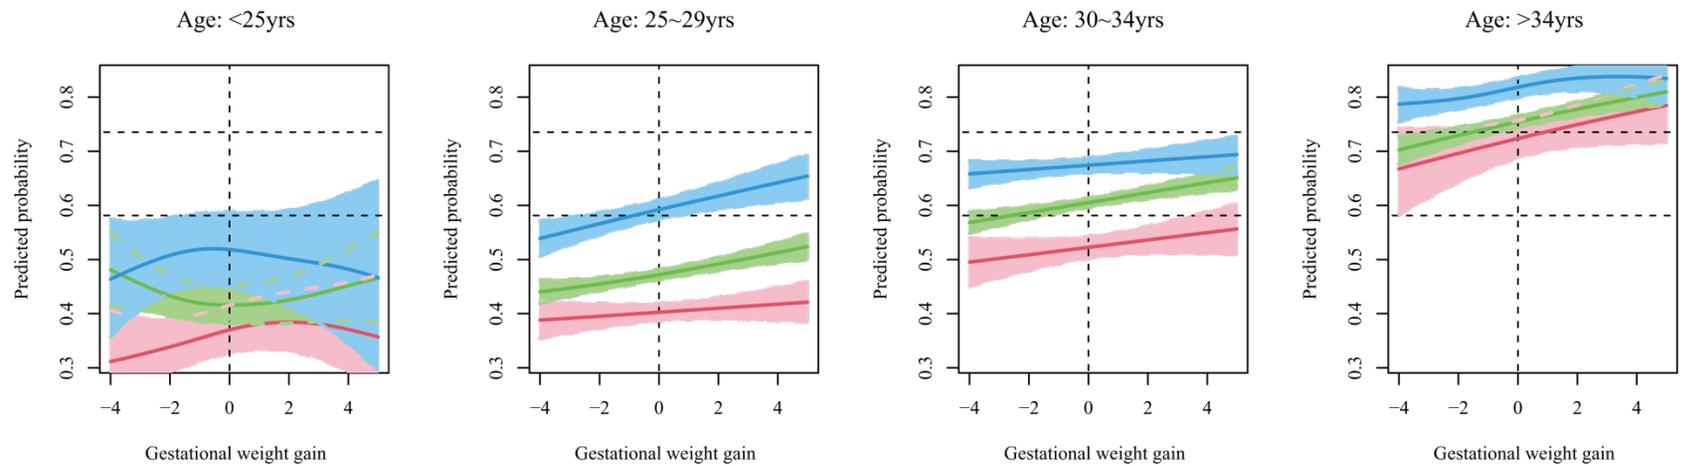

- Generalized additive model (GAM) was used for predictive model of each disease.
- The above statistical model was applied to subsets of each age and BMI (ASIA).
- Reference weight gain = 5kg (Mean weight gain of mothers without any disease).

## 2. Evaluation of weight gain between 24 and 34 weeks after pregnancy

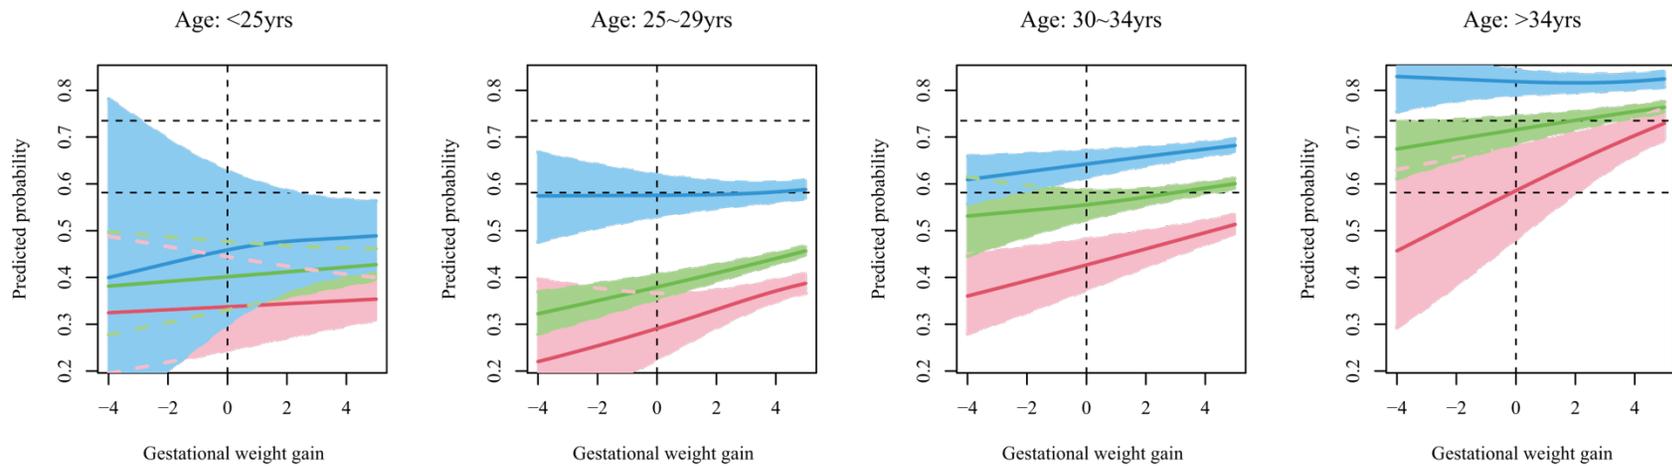

- Generalized additive model (GAM) was used for predictive model of each disease.
- The above statistical model was applied to subsets of each age and BMI (ASIA).
- Reference weight gain = 5kg (Mean weight gain of mothers without any disease).

### 3. Evaluation of weight gain between pre and 34 weeks after pregnancy

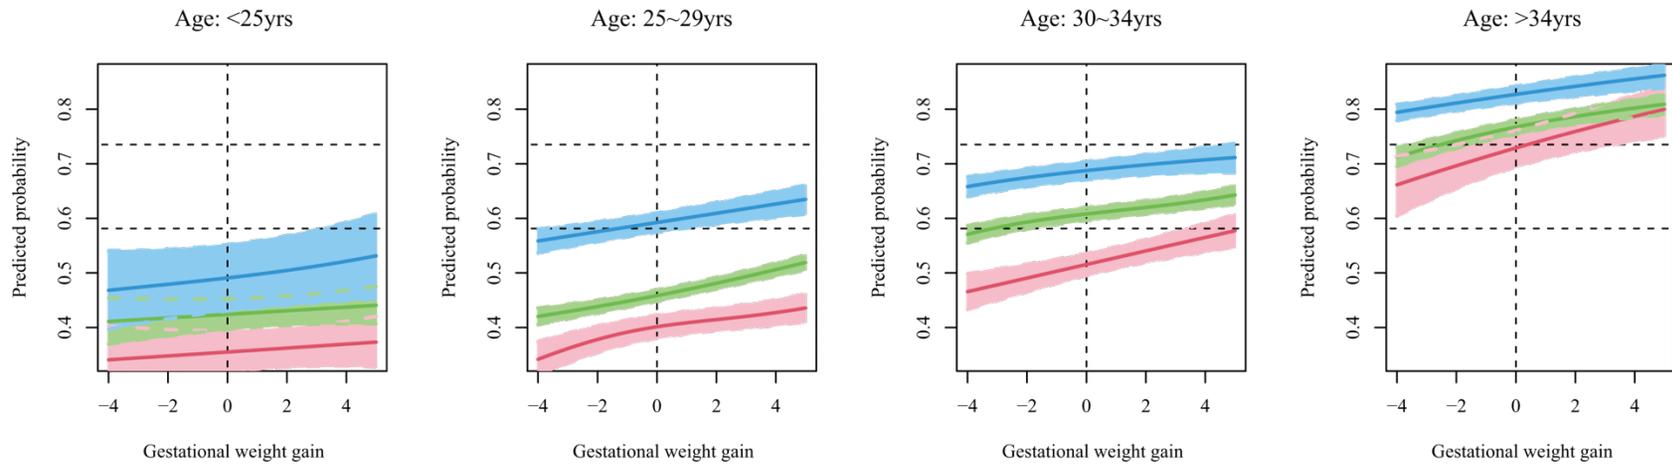

- Generalized additive model (GAM) was used for predictive model of each disease.
- The above statistical model was applied to subsets of each age and BMI (ASIA).
- Reference weight gain = 5kg (Mean weight gain of mothers without any disease).
