

Supplementary Figure 1. Specificity of the SOCS1 Ab. Cos-7 cells cultured in 60mm Petri dishes were transfected with human SOCS1 construct (S) or the control vector pcDNA 3.0 (V). The transfected cells were lysed 36h later in 100 μ l SDS-PAGE sample buffer, and the indicated quantities of whole cell lysates were analyzed by western blot using the H-93 anti-SOCS1 Ab from Santa Cruz Biotechnology at 1:500 dilution. A duplicate blot was probed for actin (Ab from Sigma) that served as loading control for vector-transfected cells.
