

Supplementary figure 6 Effects of photon vs. proton irradiation on PLS (Sarc-P-117)

Viability of PLS cell culture after 4 (A) and 8 (B) days of incubation following increasing dosages of photon and proton irradiation. Mean \pm standard error of the mean; empty circles, cells overgrown; *, $p < 0.05$ comparison between the same dosages of photon vs. proton irradiation; at least one experiment with 4 technical replicates in each.
