Supplementary material: FigureS2. Original western blot(blots were cut prior to hybridisation with antibodies during blotting)

The proteins from left to right come from adjacent non-tumor and tumor tissues of different patients.

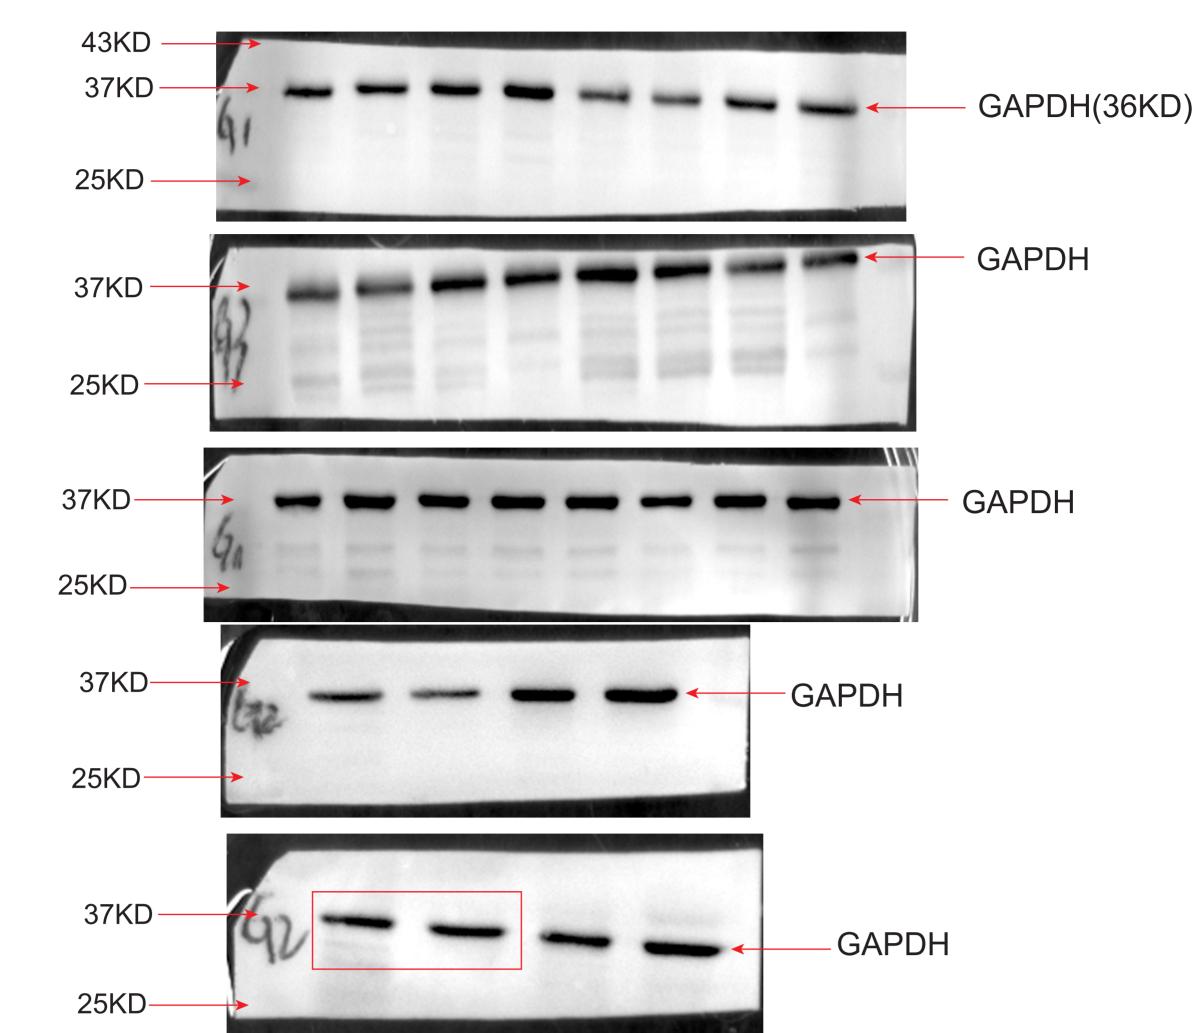

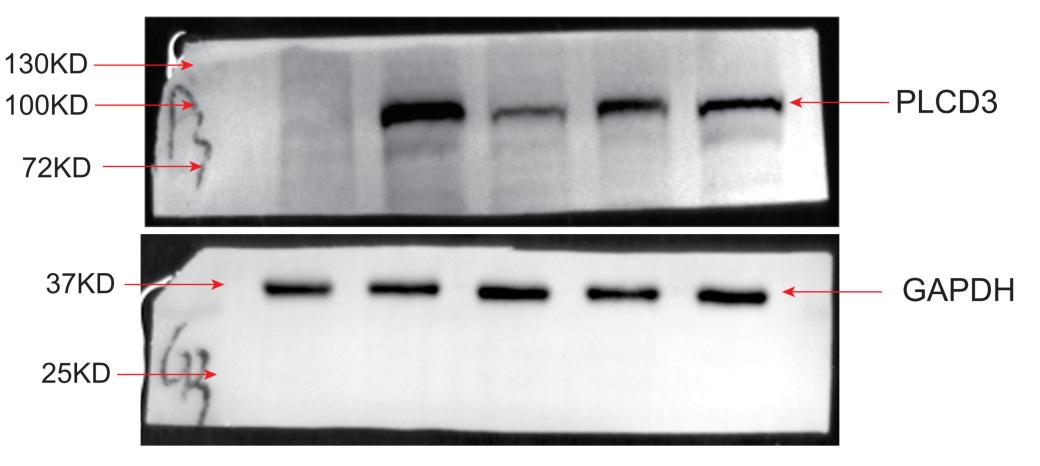

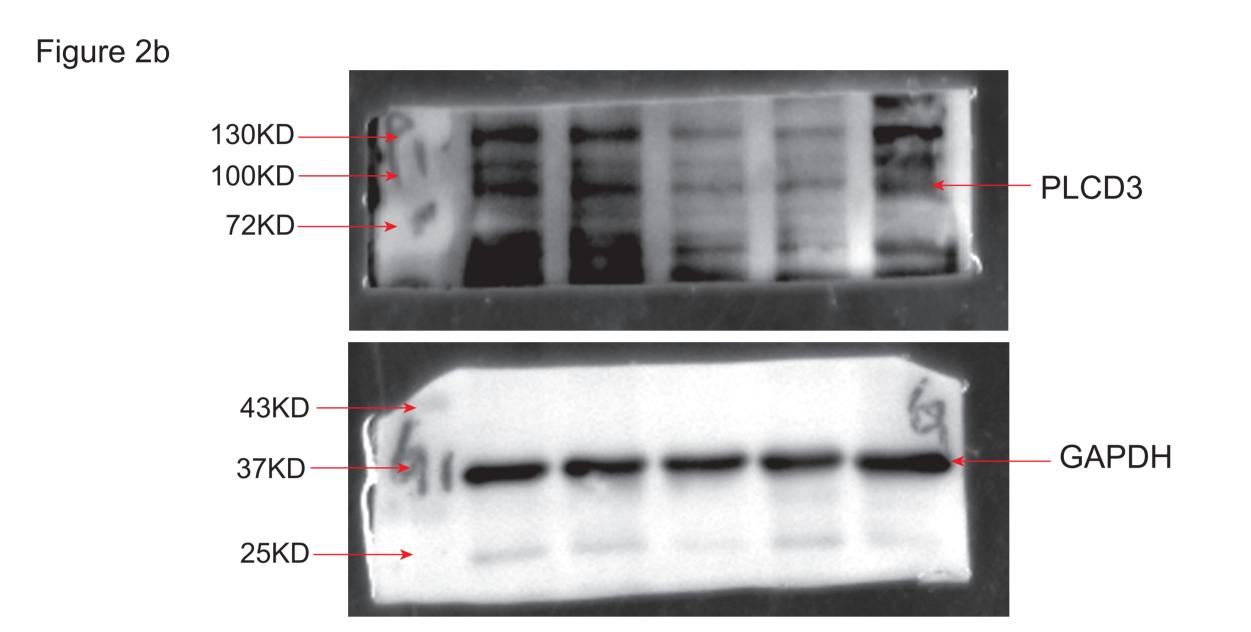

Figure 1d

The proteins from left to right come from adjacent non-tumor and tumor tissues of different patients.

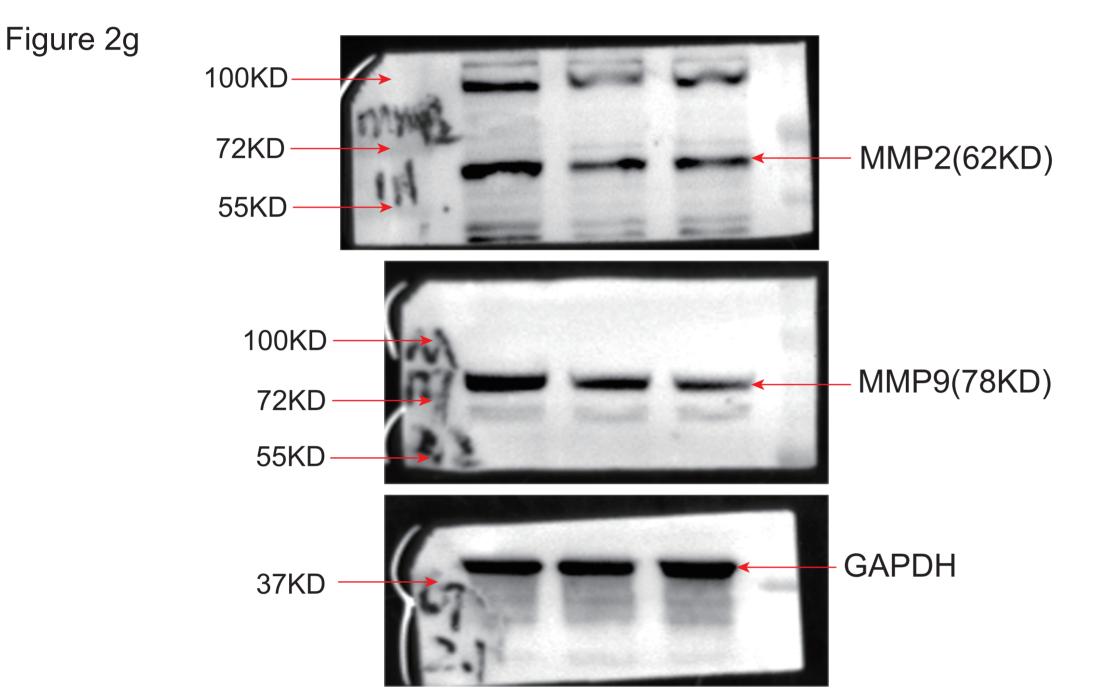

Figure 1e

The proteins from left to right come from HEEpiC, ECA109, KYSE150, KYSE410, TE1.

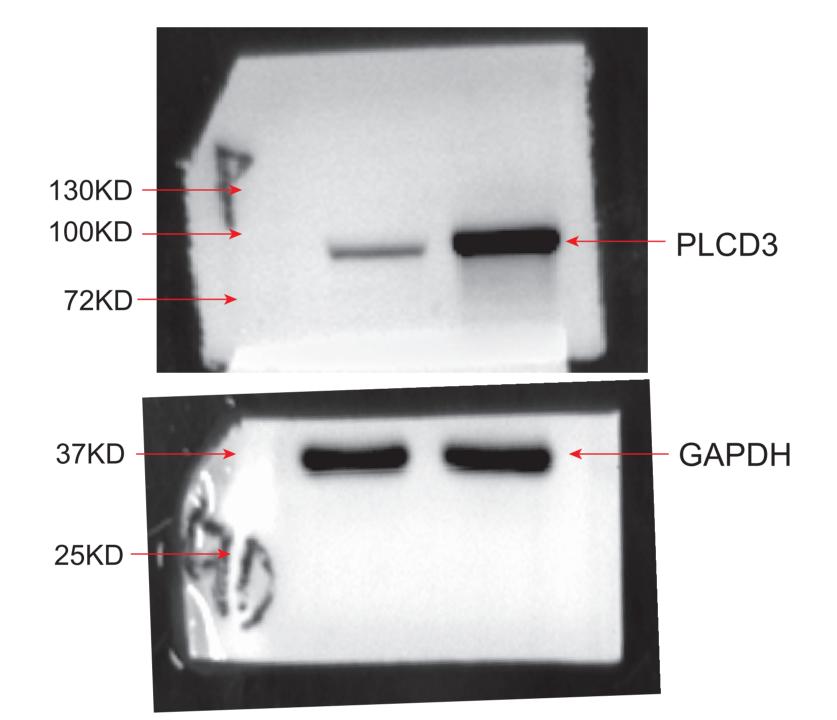

The proteins from left to right come from ECA109 infected with control,siNC,siRNA1,siRNA2 siRNA3.

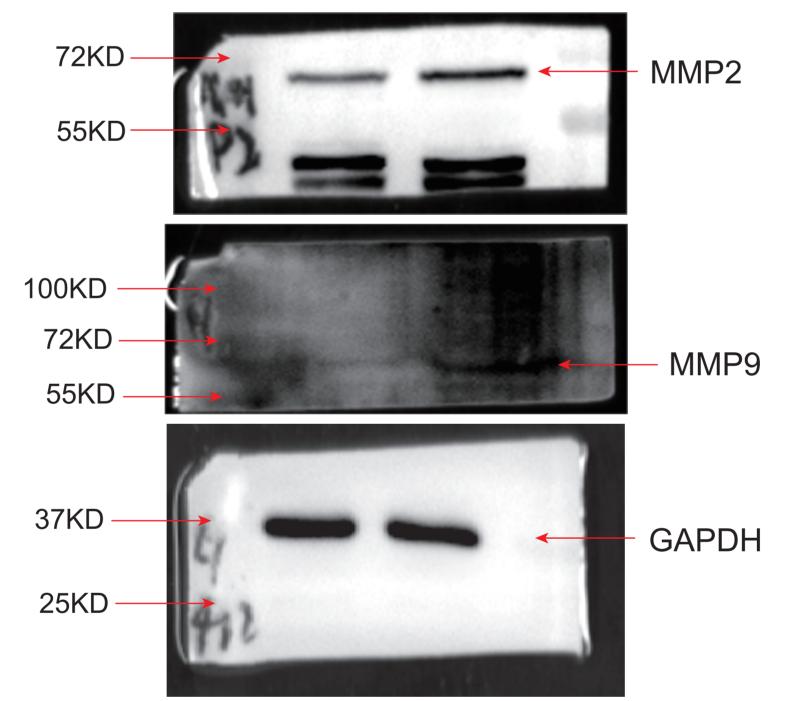

The proteins from left to right come from ECA109 infected with siNC,siRNA2,siRNA3.

Figure 3b

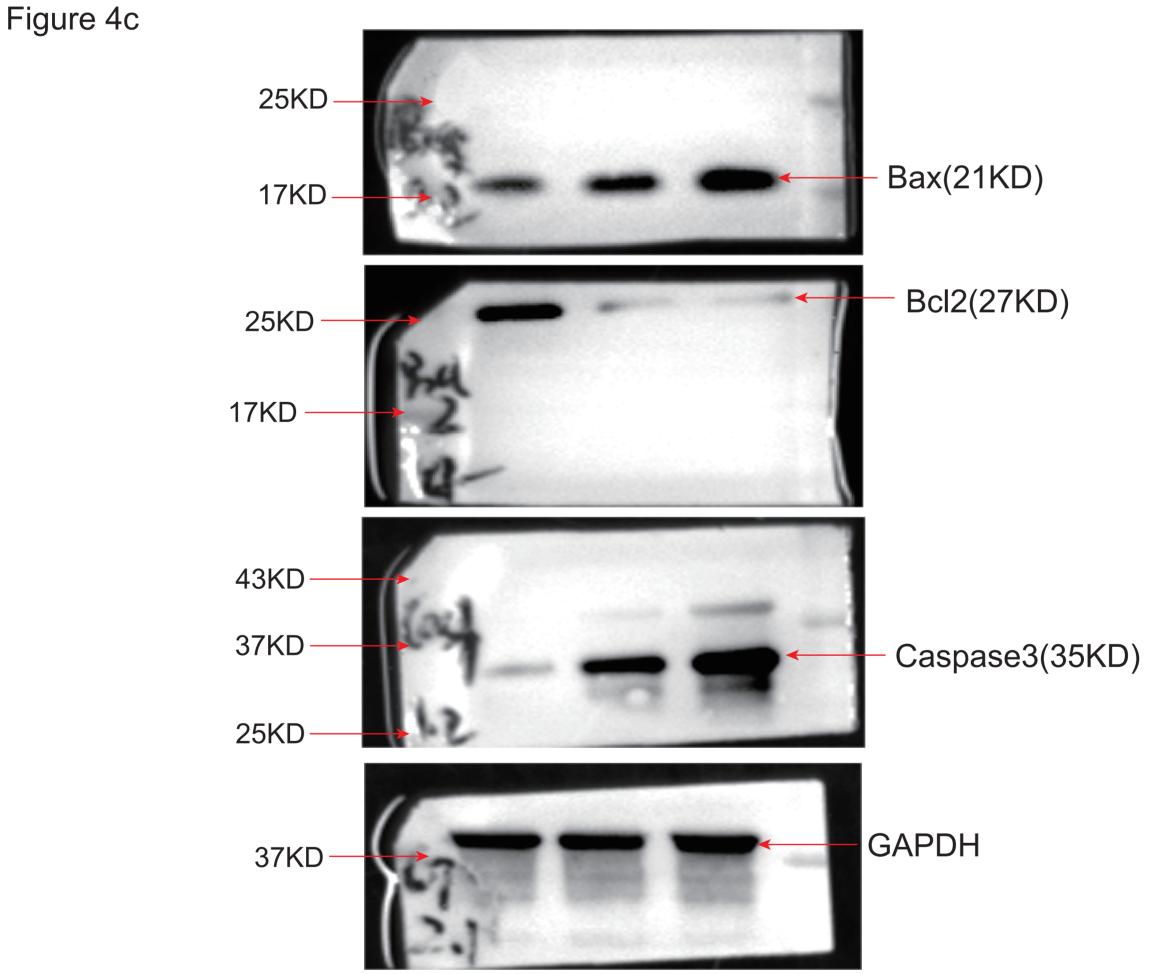

The proteins from left to right come from KYSE150 infected with NC,OE.

Figure 3g

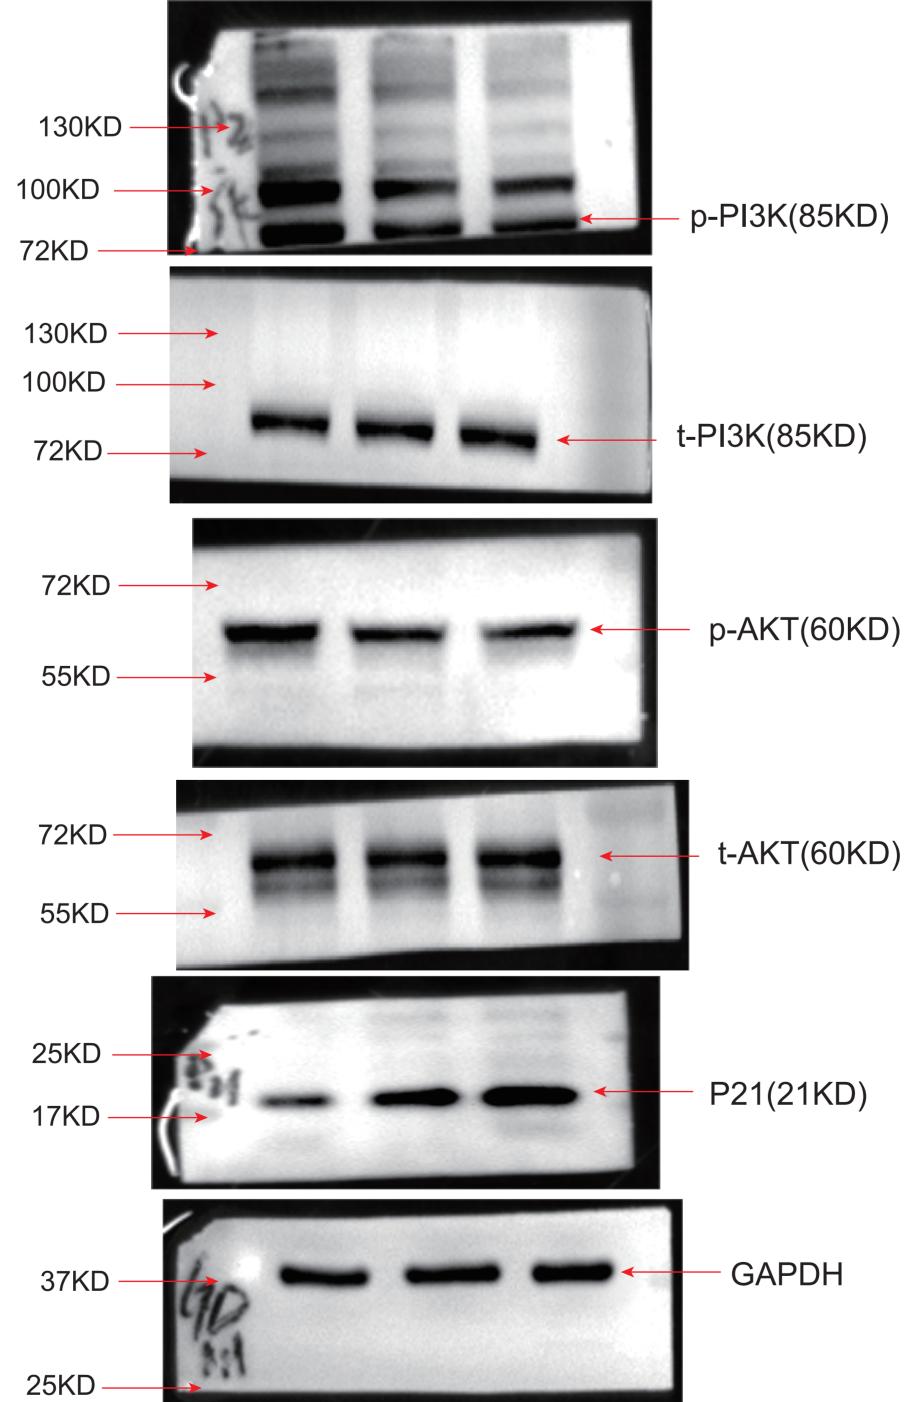

The proteins from left to right come from KYSE150 infected with NC,OE.

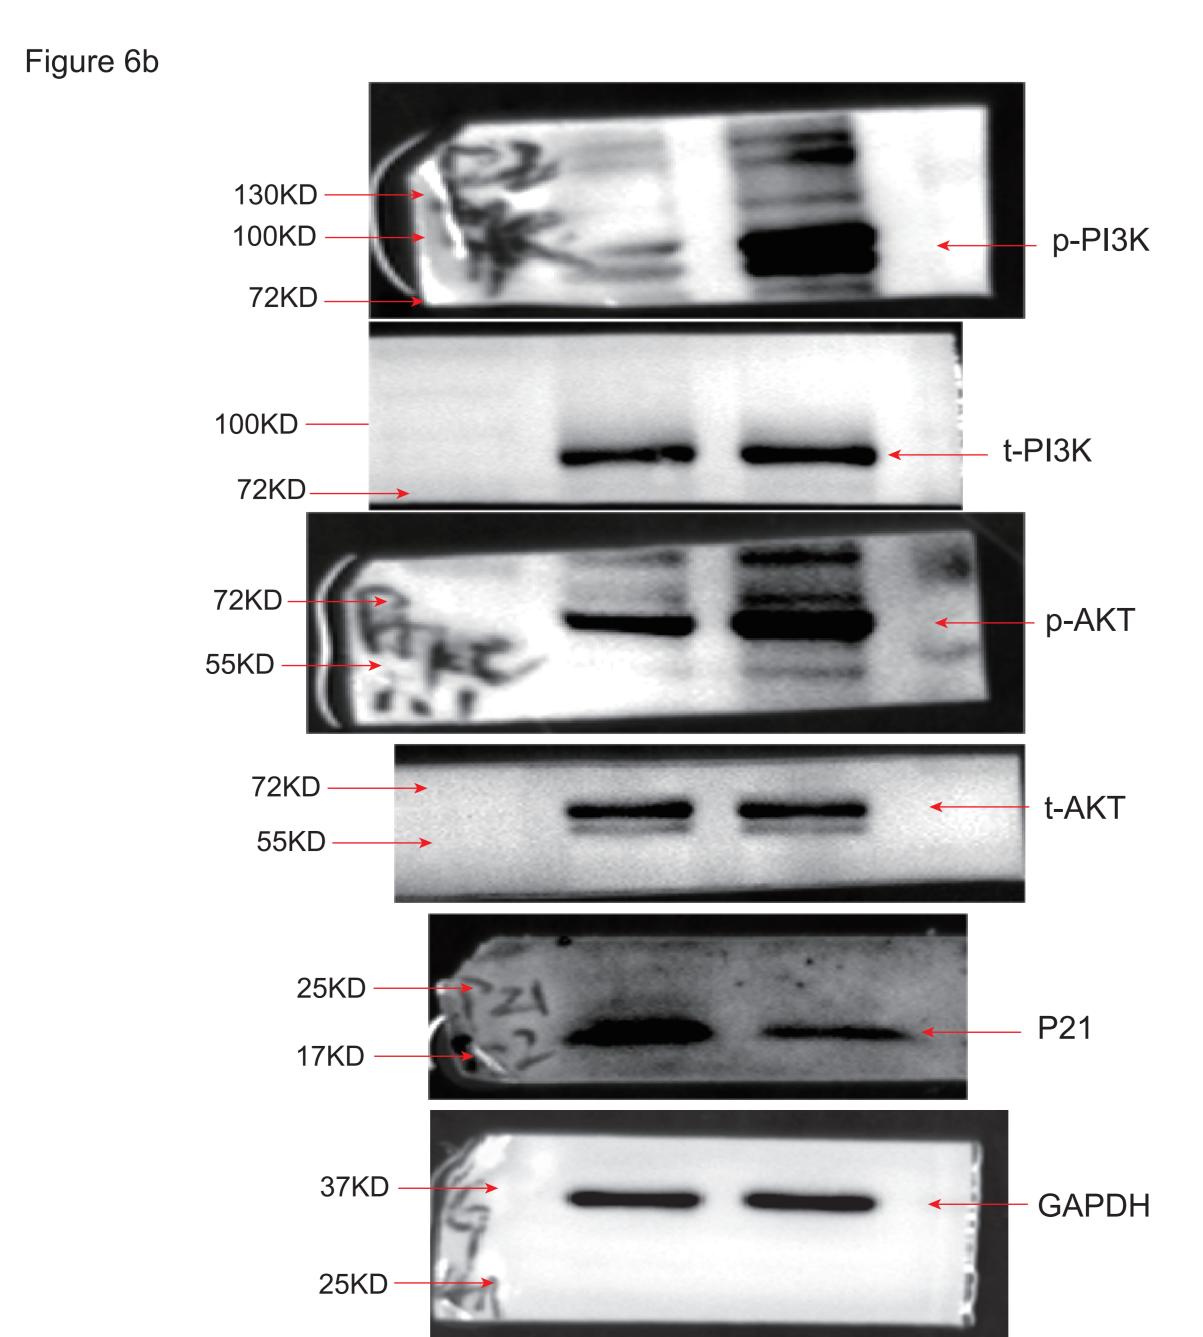

The proteins from left to right come from ECA109 infected with siNC,siRNA2,siRNA3.

Figure 6a

The proteins from left to right come from ECA109 infected with siNC,siRNA2,siRNA3.

The proteins from left to right come from KYSE150 infected with NC,OE.
