

## Supplemental figure 2

Annual percentage of cases (black line) presenting with food bolus impaction, ingestion of foreign bodies or chemical substances of all cases presented at the Emergency Department from 2009 to 2017. Linear regression analysis (grey dotted line) revealed a significant raise of this percentage over time ( $R^2=0.83$ ;  $\beta=0,912$ ;  $p=0.001$ ).
