

Iodine Module
Objectives: To obtain data on iodine supply in children and adolescents, to identify risk groups with iodine deficiencies, to assess determinants of iodine supply.
Population: All KiGGS participants, aged 6+ years, about 12 000 individuals.

Nutrition Module (EsKiMo)
Objectives: To obtain data on food consumption and nutrition behaviour in children and adolescents.
Population: Subsample of KiGGS participants, aged 6-17 years, 2506 individuals.

Mental Health Module (BELLA)
Objectives: To obtain data on mental health problems in children and adolescents, to identify determinants of mental health in different phases of development.
Population: Subsample of KiGGS participants, aged 7-17 years, 2863 individuals.

KiGGS Core Survey
Objectives:
To obtain main indicators of physical and mental health, risk factors, health service utilisation, health-relevant behaviour and living conditions in children and adolescents.
Population:
Representative sample of 17 641 children and adolescents (8656 girls, 8985 boys), aged 0-17 years, in 167 communities.

State Module "Schleswig-Holstein"
Objectives: To obtain representative health-related data on state level.
Population: Additional sample of 1730 children and adolescents, aged 11-17 years, in another 18 communities in the state of Schleswig-Holstein.

Motor Activity Module (MoMo)
Objectives: To assess motor fitness and physical activity in children and adolescents, to compare results with existing reference values, to calculate new reference values, to appraise differences and developments.
Population: Subsample of KiGGS participants, aged 4-17 years, 4529 individuals.

Environmental Module (KUS)
Objectives: To identify and quantify environmental determinants of health in children and adolescents.
Population: Subsample of KiGGS participants, aged 3-14 years, 1790 individuals.
