

Praeventis random sample

Dutch addresses (n = 6,000) of girls born in 1995 or 1996 stratified by ethnicity and vaccine uptake.

Ethnicity:

- 3,300 general sample;
- 2,700 selected sample of which 900 per ethnical group (Turkey, Morocco, and Surinam/Antilles).

Vaccine uptake per general/selected sample:

- One third with girls with ≥ 1 HPV injection;
- Two thirds with girls with 0 injections.

Online panel random sample

Mothers of girls born in 1995 or 1996 (n = 650)
Daughters (n = 350 of the sample of mothers)

Excluded (n = 2;
unknown address)

Received invitation
Addresses (n = 5,998)

Received invitation
Mothers (n = 650)
Daughters (n = 350)

Received reminder
Addresses (n = 5,929)

Started with survey
Mothers (n = 564)
Daughters (n = 537)

Completed survey
Mothers (n = 445)
Daughters (n = 404)

Completed survey
Mothers (n = 511)
Daughters (n = 243)

Excluded
Mothers (n = 4): male (n = 3), invalid age (n = 1)
Daughters (n = 5): male (n = 2), invalid age (n = 3)

Data available for analyses
Mothers (n = 952)
Daughters (n = 642)
