	Max			83.7%		19.7%	51.6%	64.0%

* The proportions shown exclude missing answers on last HIV test result (N=1,223) and thus differ slightly from the proportions resulting from dividing the respective numbers with reported HIV through the numbers of men who ever tested for HIV.

** ncUAI = non-concordant unprotected anal intercourse, i.e. with a sexual partner of unknown of serodiscordant HIV status

*** excluding men with HIV diagnosed longer than 12 months ago
