### INTRODUCTION

The Youth Sexual Intention Questionnaire (YSI-Q) is a 20 item self-administered questionnaire and was constructed based on the Theory of Planned Behaviour. It is designed to measure current sexual intention of both male and female unmarried youths. YSI-Q is scored based on the responses on a 4-point Likert scale from 1 (strongly disagree) to 4 (strongly agree). A higher total score of item 1 to 5 indicates a higher intention to have sex, a higher total score of item 6 to 10 indicates a higher permissive attitude towards premarital sex, a higher total score of item 11 to 16 indicates a higher perception of social norms on premarital sex and a higher total score of item 17 to 20 indicates a higher perception of self-efficacy on performing sexual activity. The Malay version of the YSI-Q is available upon request.
