Abbreviations: SED, sedentary time; LPA, light physical activity; MVPA, moderate-to-vigorous physical activity. To test for difference between groups: chi squared was used for categorical data and t-test for continuous data. MANOVA was used for isometric log ratio-transformed compositional time use data. *Bold *P* values indicate statistical significant difference at alpha < 0.05 ^SParent education levels are: 1 = less than high school or some high school; 2 = completed high school or some post-secondary (e.g. vocational diploma or certificate); 3 = bachelor degree or post-graduate. [#]number of excluded participants with complete data for relevant covariate
