

1    **Supplementary Figure 1: Observed and predicted DALY rate (per 100,000 population) in the 20–49 age**  
2    **group for cardiovascular diseases for reference forecast and three alternative scenarios, 1990–2040: (A)**  
3    **men, (B) women, and (C) both sexes combined**

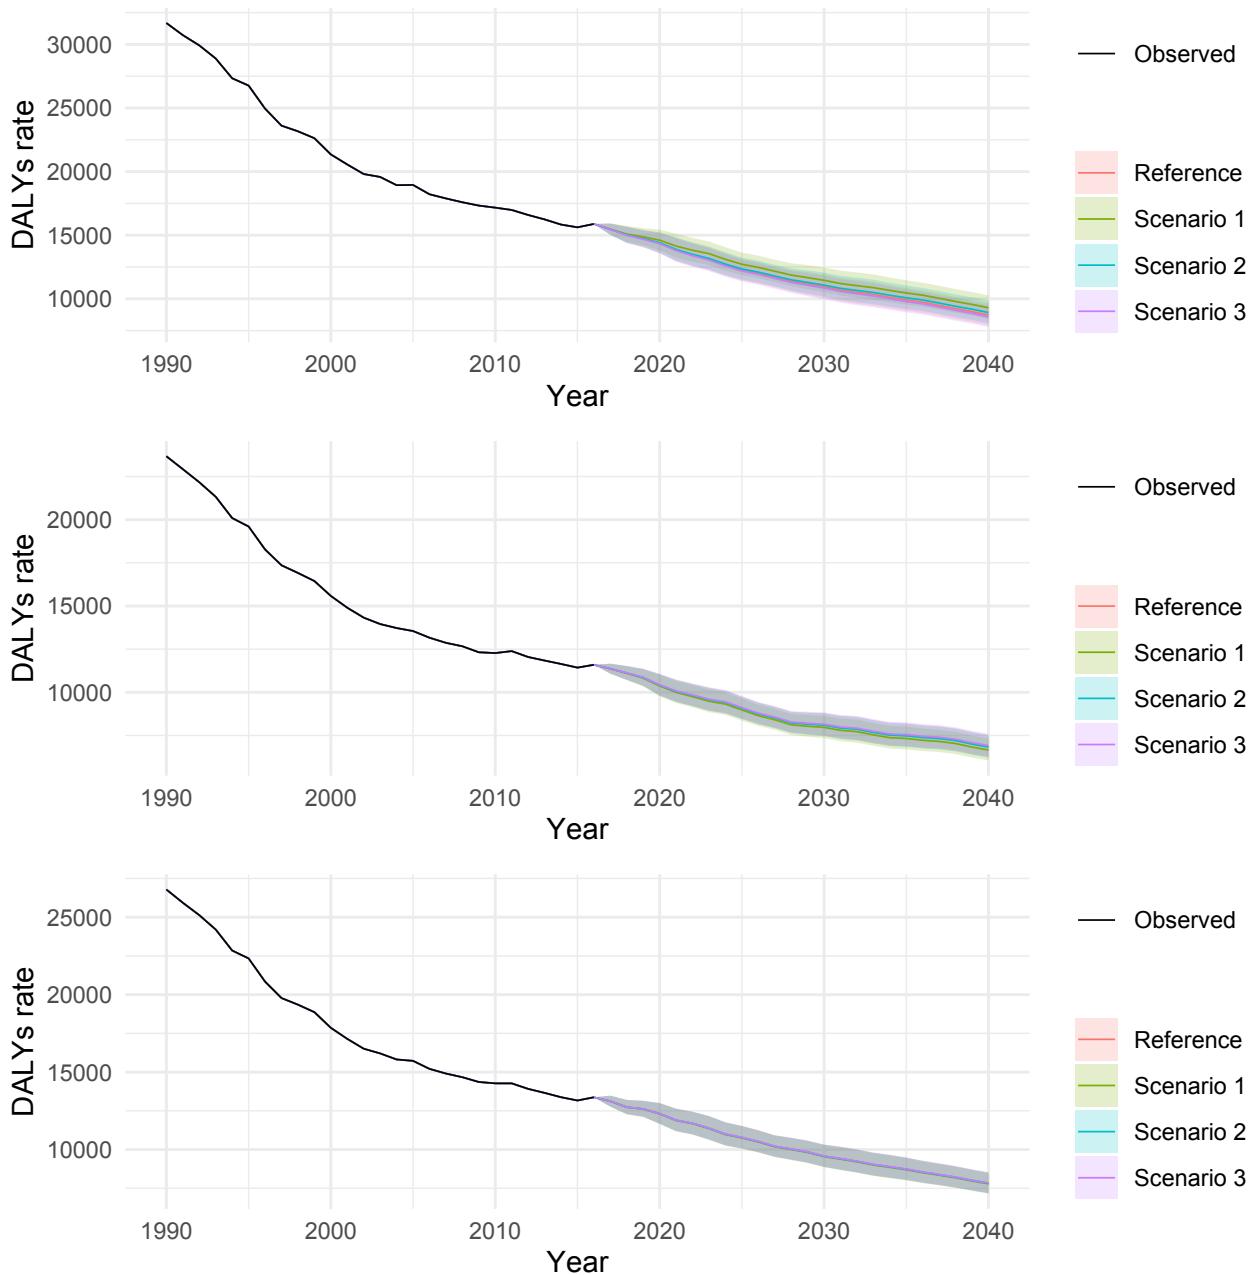

4  
5    1: best scenario; 2: moderate scenario; 3: worse scenario. It is important to note that the y-axis scales are  
6    different for each panel in order to make the differences between scenarios easier to understand.

7    **Supplementary Figure 2: Observed and predicted DALY rate (per 100,000 population) in the 50–69 age**  
8    **group for cardiovascular diseases for reference forecast and three alternative scenarios, 1990–2040: (A)**  
9    **men, (B) women, and (C) both sexes combined**

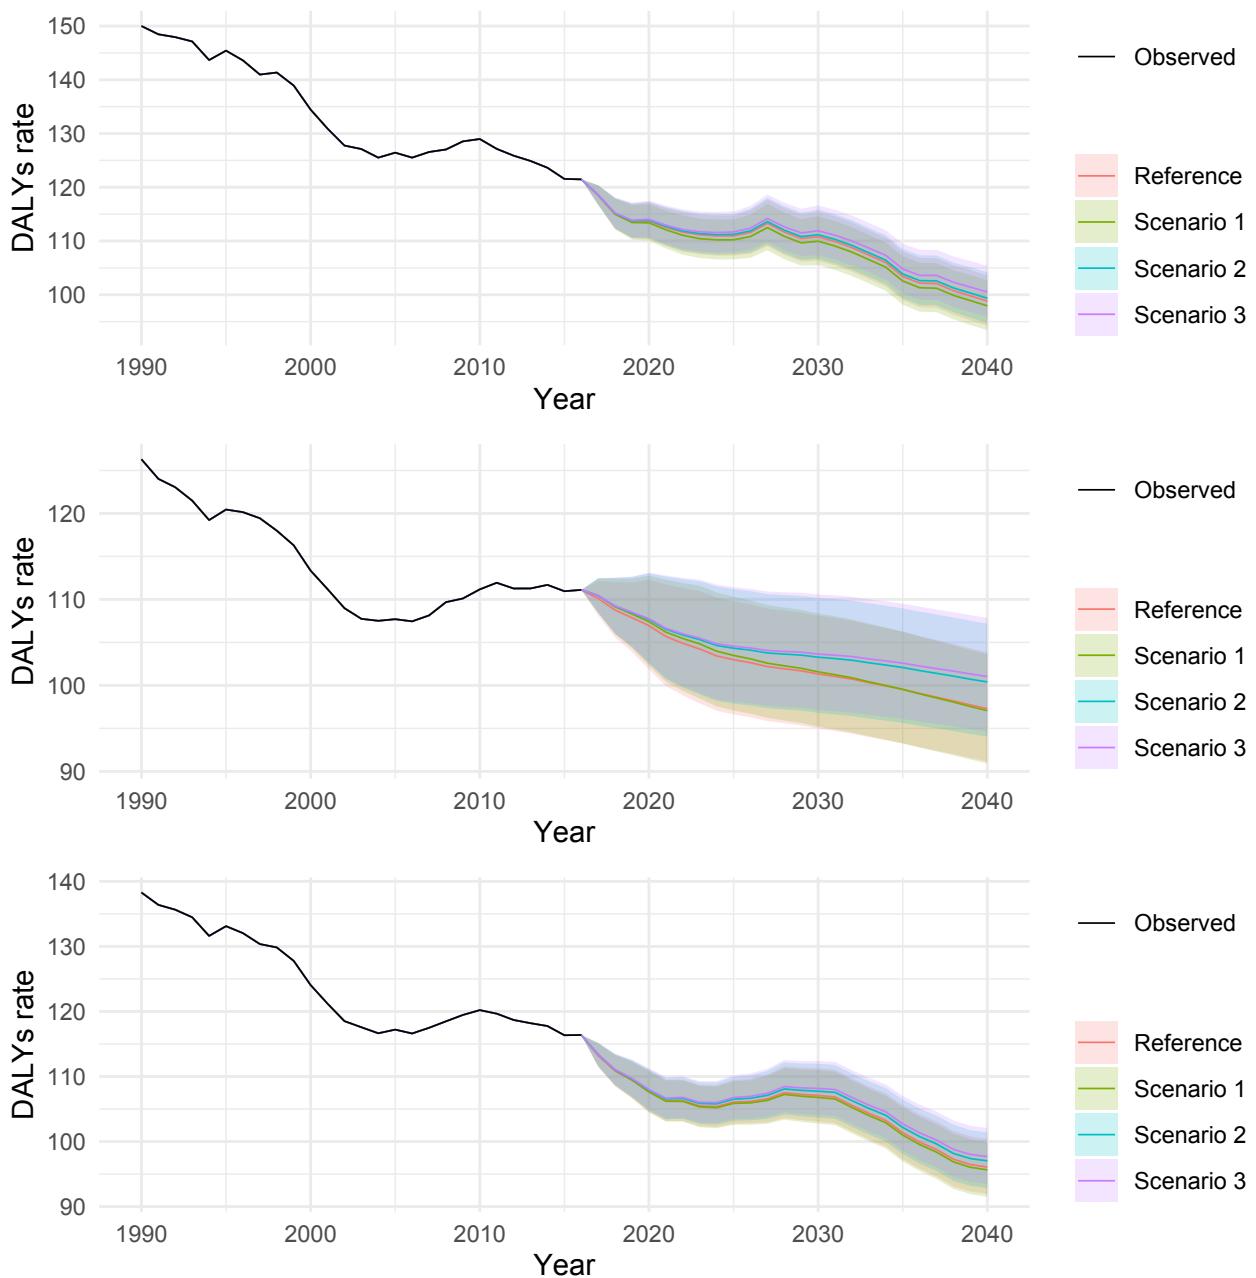

10  
11    1: best scenario; 2: moderate scenario; 3: worse scenario. It is important to note that the y-axis scales are  
12    different for each panel in order to make the differences between scenarios easier to understand.

13    **Supplementary Figure 3: Observed and predicted DALY rate (per 100,000 population) in the  $\geq 70$  age group**  
14    **for cardiovascular diseases for reference forecast and three alternative scenarios, 1990–2040: (A) men, (B)**  
15    **women, and (C) both sexes combined**

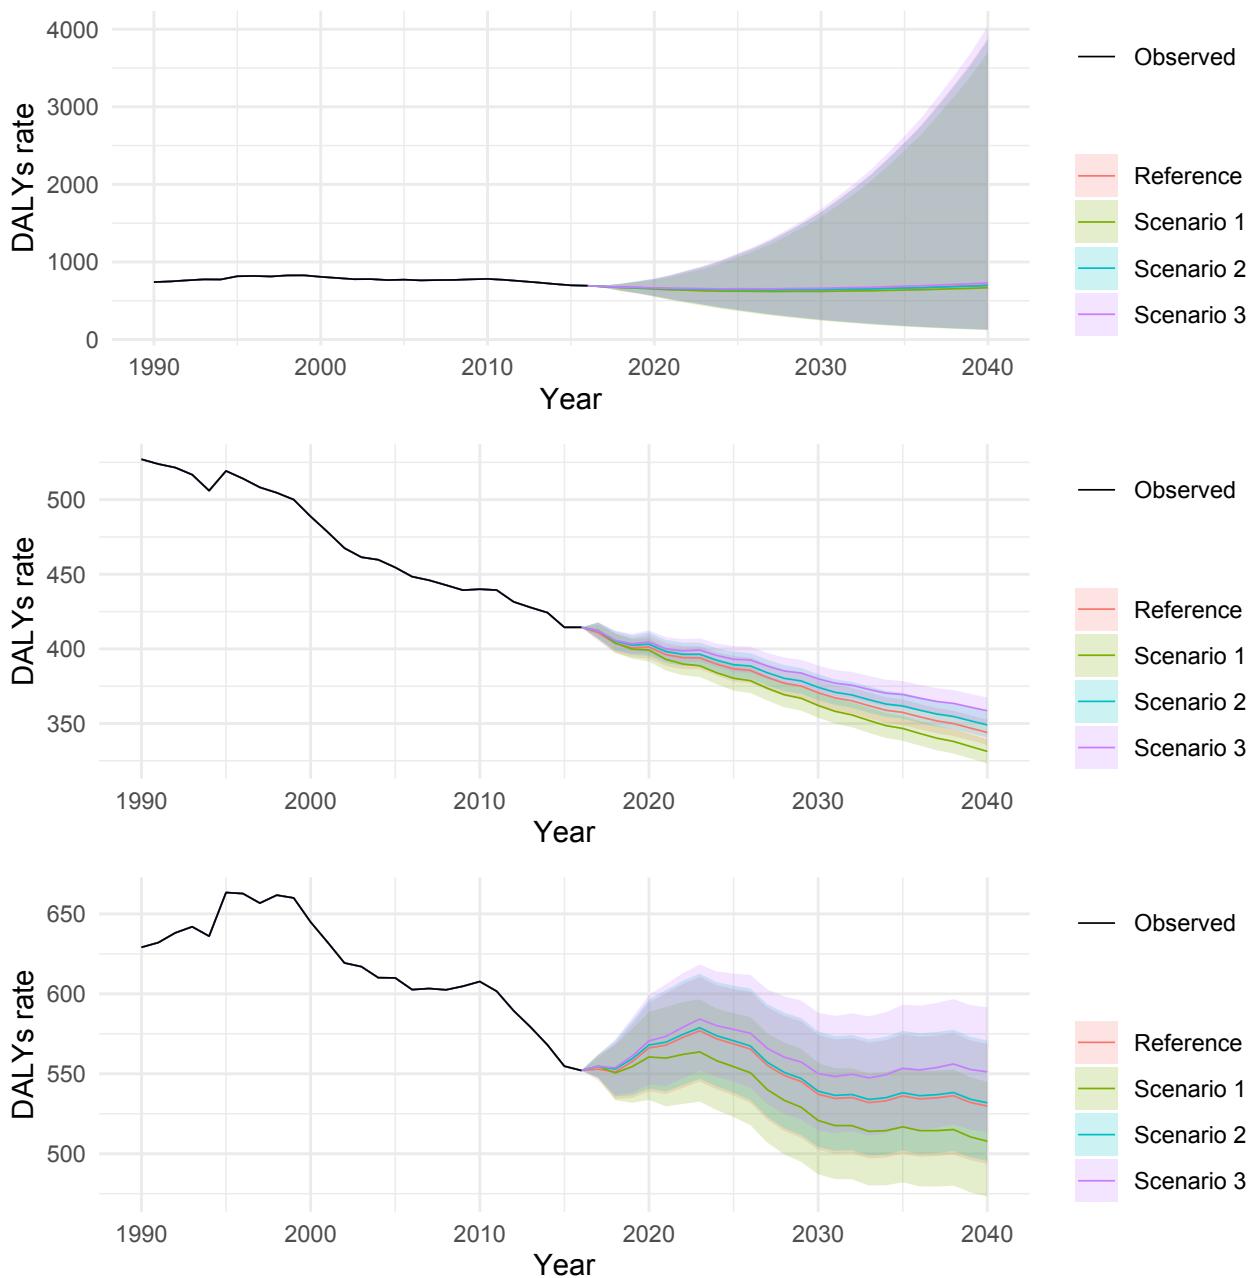

16  
17    1: best scenario; 2: moderate scenario; 3: worse scenario. It is important to note that the y-axis scales are  
18    different for each panel in order to make the differences between scenarios easier to understand.

19    **Supplementary Figure 4: Observed and predicted DALY rate (per 100,000 population) in the 20–49 age**  
20    **group for chronic kidney diseases for reference forecast and three alternative scenarios, 1990–2040: (A)**  
21    **men, (B) women, and (C) both sexes combined**

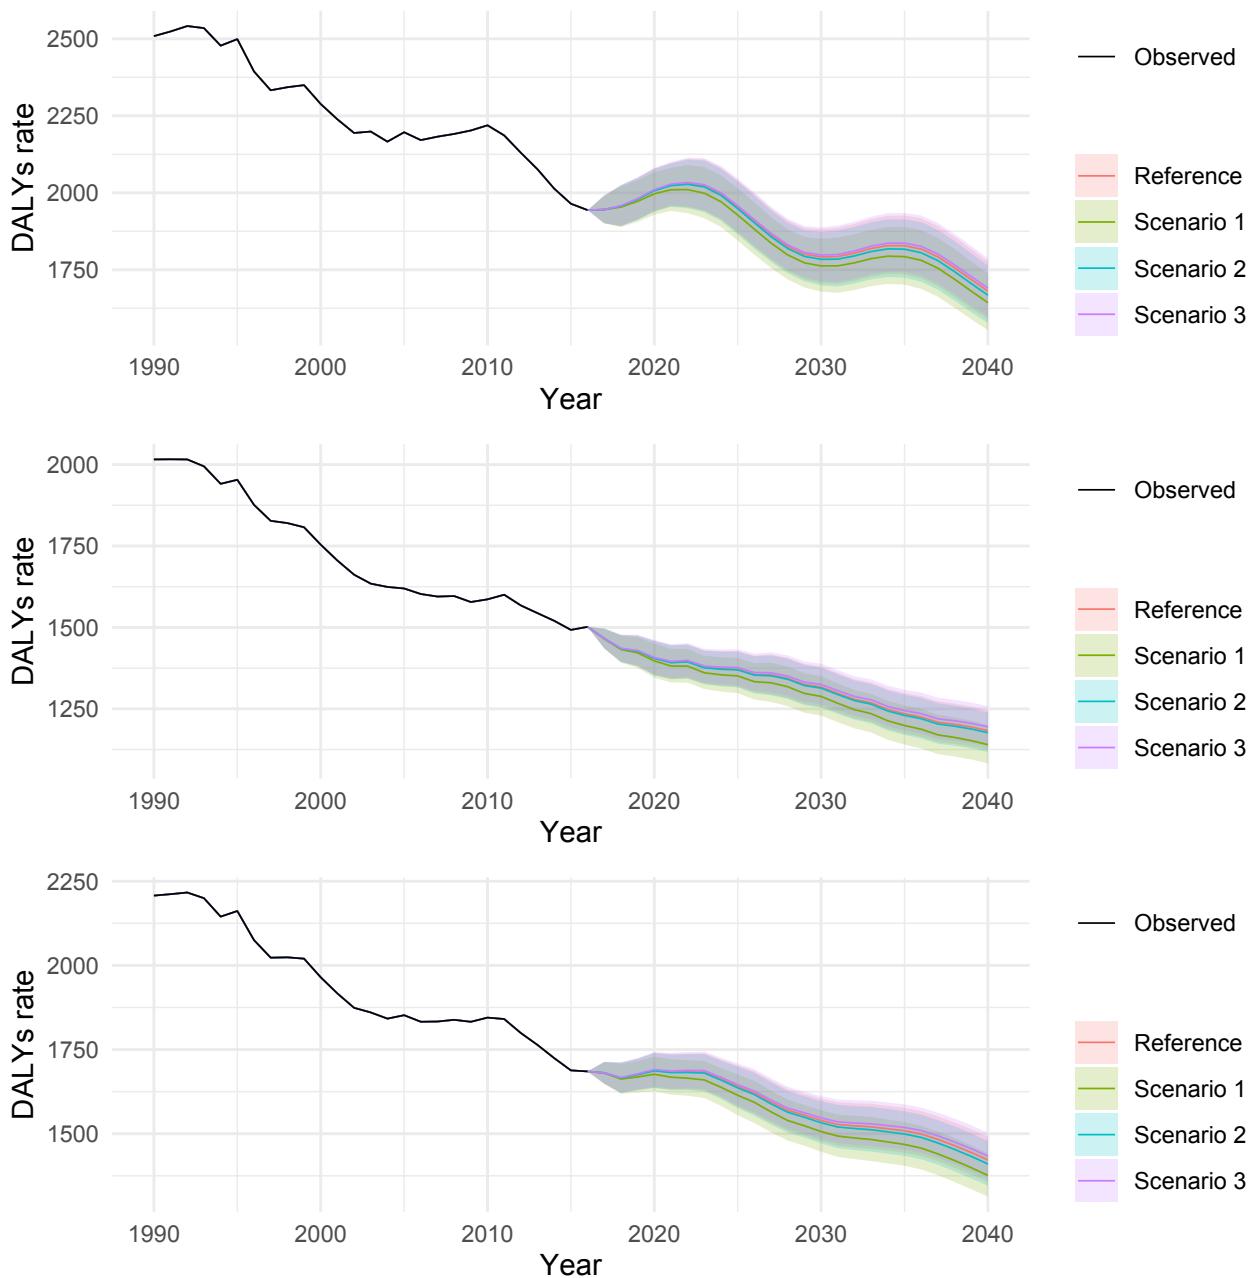

22  
23    1: best scenario; 2: moderate scenario; 3: worse scenario. It is important to note that the y-axis scales are  
24    different for each panel in order to make the differences between scenarios easier to understand.

25    **Supplementary Figure 5: Observed and predicted DALY rate (per 100,000 population) in the 50–69 age**  
26    **group for chronic kidney diseases for reference forecast and three alternative scenarios, 1990–2040: (A)**  
27    **men, (B) women, and (C) both sexes combined**

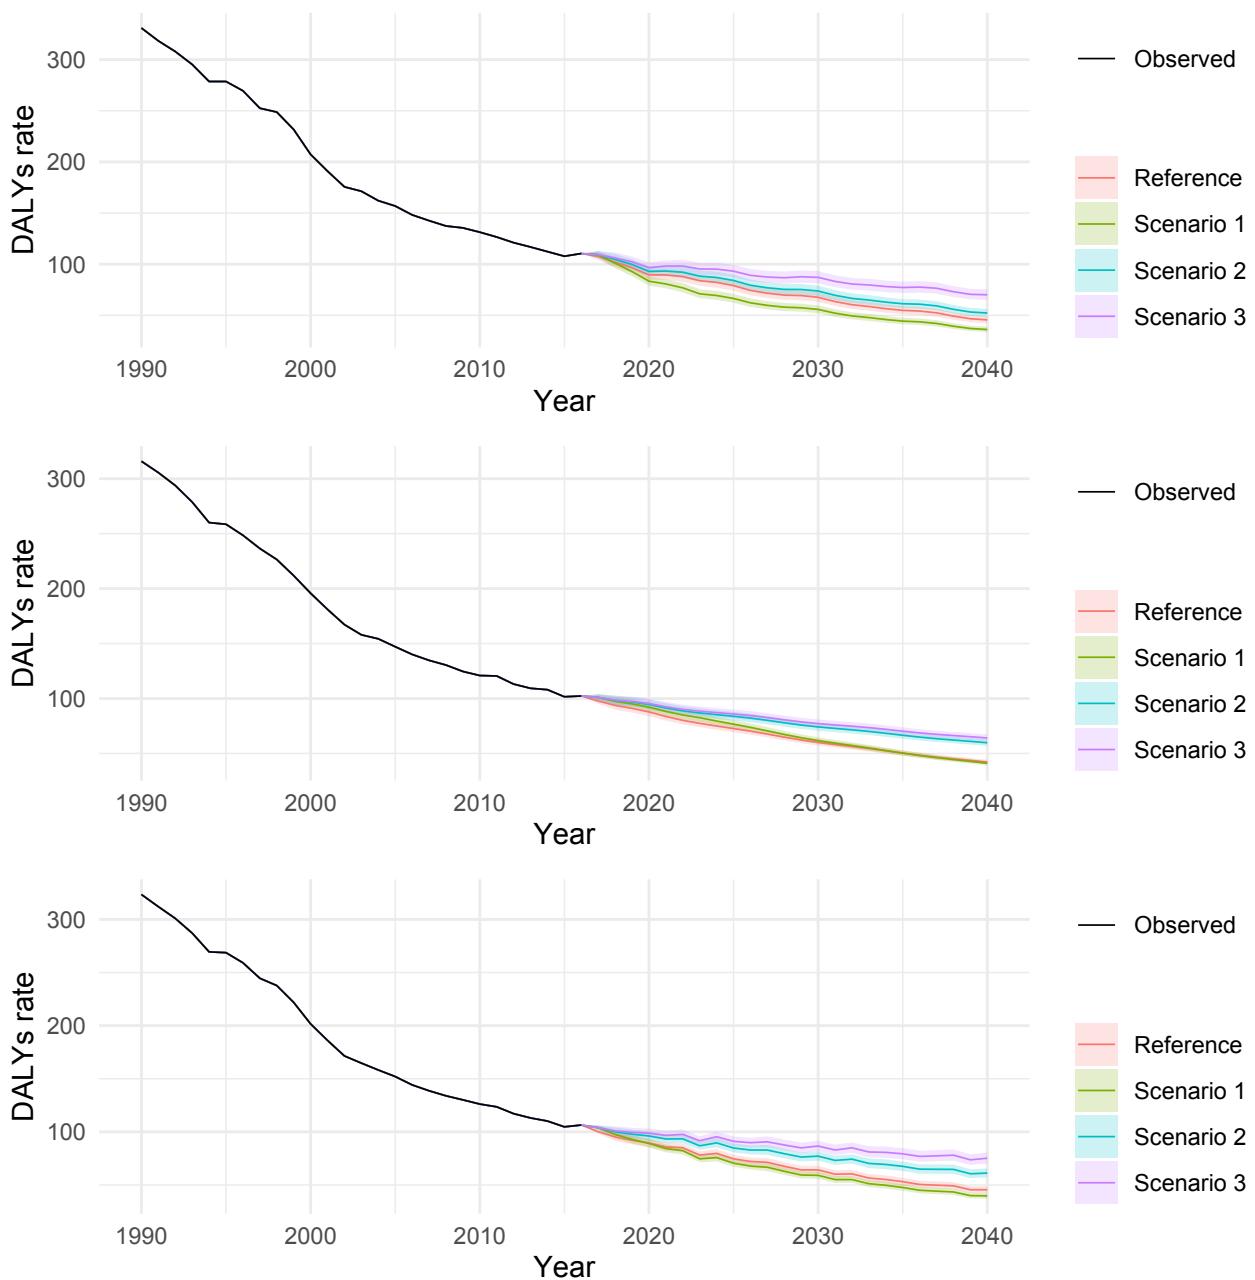

28  
29    1: best scenario; 2: moderate scenario; 3: worse scenario. It is important to note that the y-axis scales are  
30    different for each panel in order to make the differences between scenarios easier to understand.

31    **Supplementary Figure 6: Observed and predicted DALY rate (per 100,000 population) in the ≥70 age group**  
32    **for chronic kidney diseases for reference forecast and three alternative scenarios, 1990–2040: (A) men, (B)**  
33    **women, and (C) both sexes combined**

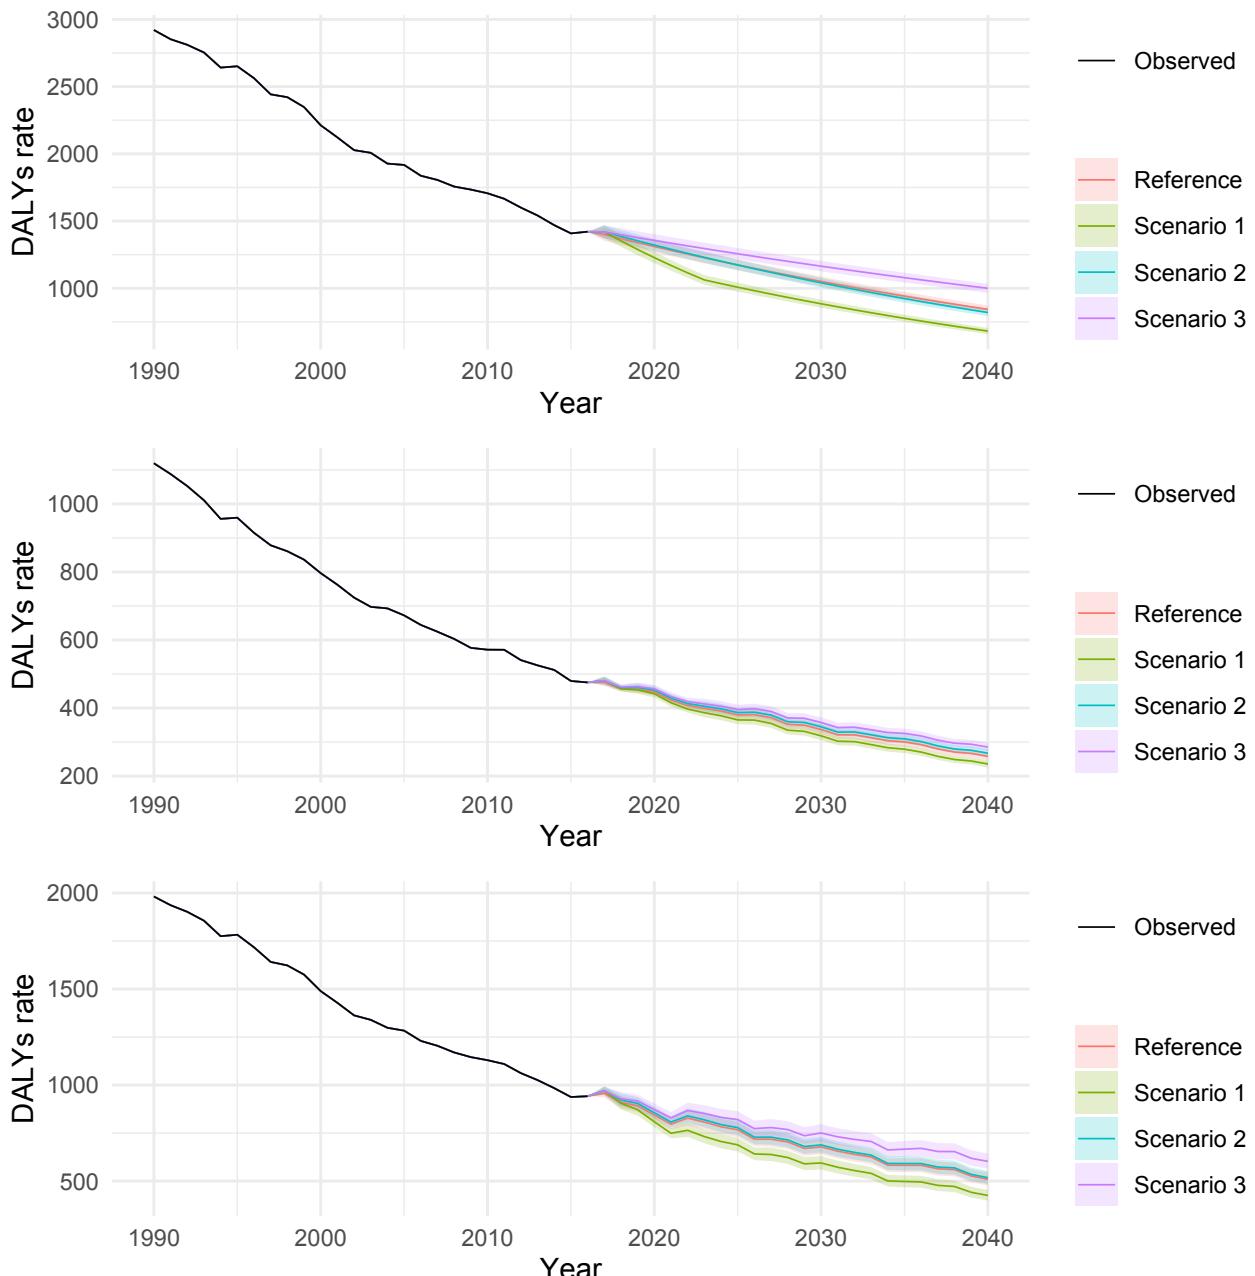

34  
35    1: best scenario; 2: moderate scenario; 3: worse scenario. It is important to note that the y-axis scales are  
36    different for each panel in order to make the differences between scenarios easier to understand.

37 **Supplementary Figure 7: Observed and predicted DALY rate (per 100,000 population) in the 20–49 age**  
38 **group for stomach cancer for reference forecast and three alternative scenarios, 1990–2040: (A) men, (B)**  
39 **women, and (C) both sexes combined**

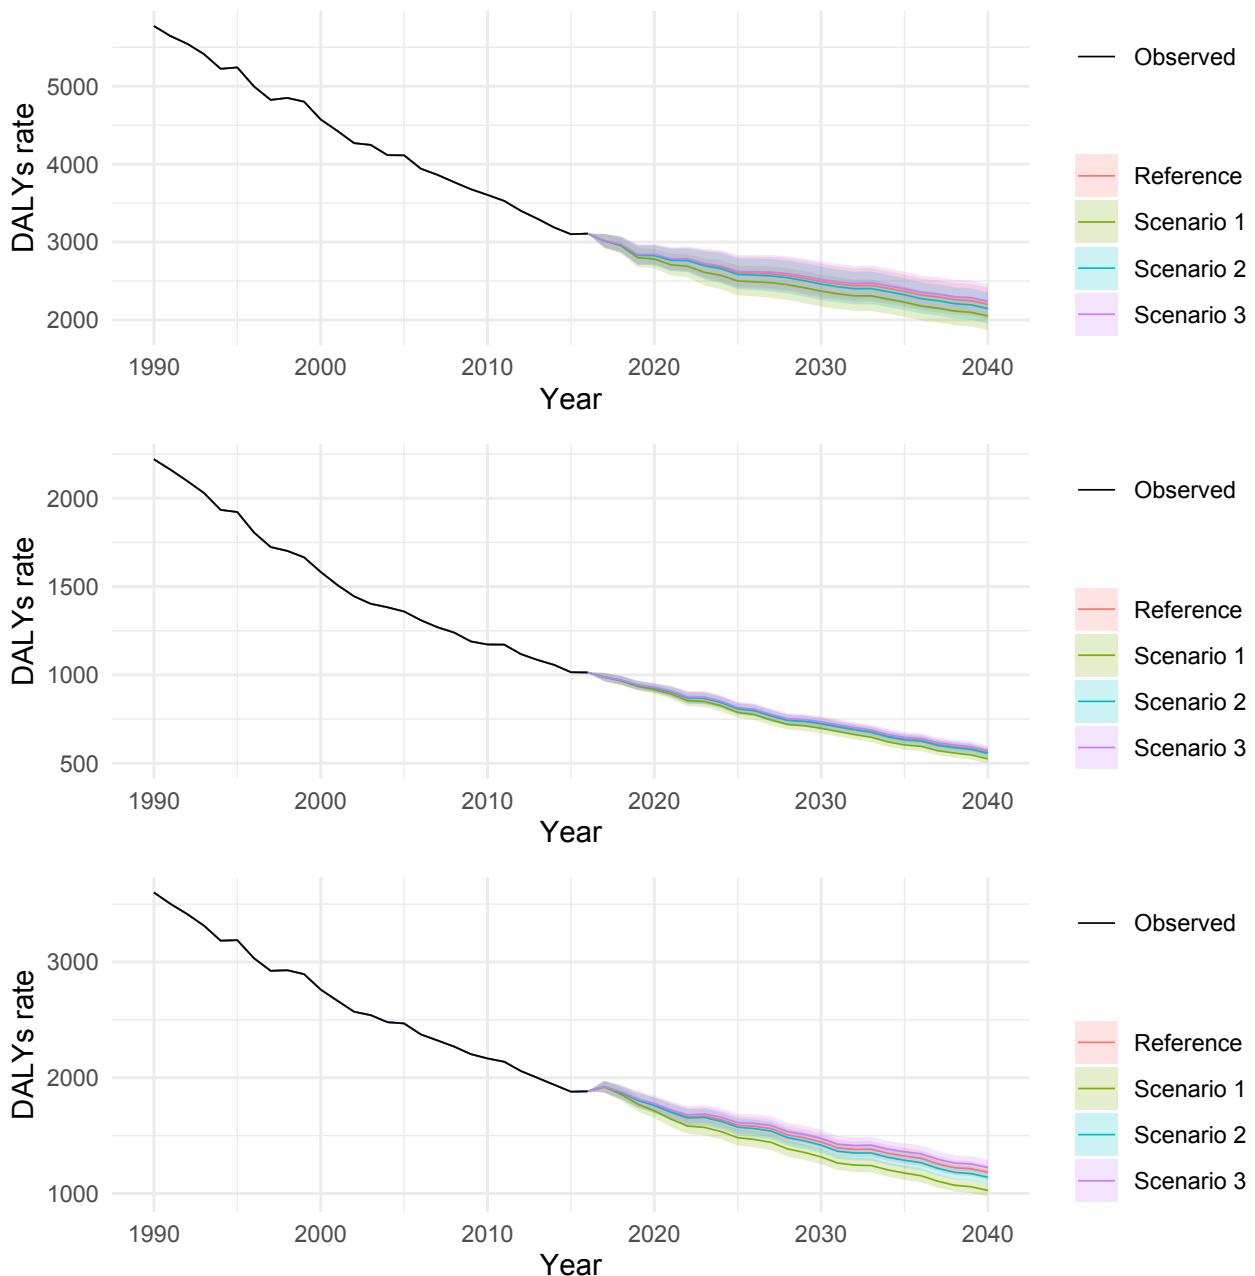

40  
41 1: best scenario; 2: moderate scenario; 3: worse scenario. It is important to note that the y-axis scales are  
42 different for each panel in order to make the differences between scenarios easier to understand.

43 **Supplementary Figure 8: Observed and predicted DALY rate (per 100,000 population) in the 50–69 age**  
 44 **group for stomach cancer for reference forecast and three alternative scenarios, 1990–2040: (A) men, (B)**  
 45 **women, and (C) both sexes combined**

46  
 47 1: best scenario; 2: moderate scenario; 3: worse scenario. It is important to note that the y-axis scales are  
 48 different for each panel in order to make the differences between scenarios easier to understand.

49      **Supplementary Figure 9: Observed and predicted DALY rate (per 100,000 population) in the  $\geq 70$  age group**  
50      **for stomach cancer for reference forecast and three alternative scenarios, 1990–2040: (A) men, (B)**  
51      **women, and (C) both sexes combined**

52  
53      1: best scenario; 2: moderate scenario; 3: worse scenario. It is important to note that the y-axis scales are  
54      different for each panel in order to make the differences between scenarios easier to understand.

55 **Supplementary Table 1: Predicted values of average salt intake (grams per day) for reference forecast and three alternative scenarios, by age groups for men**

56 **(A), women (B), and both sexes combined (C); and for all ages by sex (D), 2017–2040.**
