Adjusted for depression and confounders	1486	0.07	0.06	0.20	0.08	-0.09	0.09	0.37	0.08	

Note:

<sup>a</sup> Adjustments: children's individual characteristics (sex, emotional and behavioural problems aged 7, depressive symptoms and bullying perpetration aged 13, employment status and income aged 23) and family characteristics (social class reported by mothers, mother's education, maternal depression and child exposure to physical or sexual abuse aged 7).

<sup>b</sup> Adjustments: depression diagnoses from the CIS-R at 18 years.

<sup>c</sup> Adjustments: peer victimisation at 23 years.

---

+ Estimates relate to the impact of occasional victimisation on wellbeing aged 23

++ Estimates relate to the impact of frequent victimisation on wellbeing aged 23
