

**Additional File 7. Country-specific trajectories of new COVID-19 cases around lockdown periods until June 30, 2020.** In each graph, the line joining the points is simply to make the order of the points more evident, and does not relate to any fitting of the datapoints. The days are plotted on the x-axis (as dates) and the number of reported new cases are plotted on the y-axis. The start and end dates of the lockdown are indicated by blue vertical lines.
