

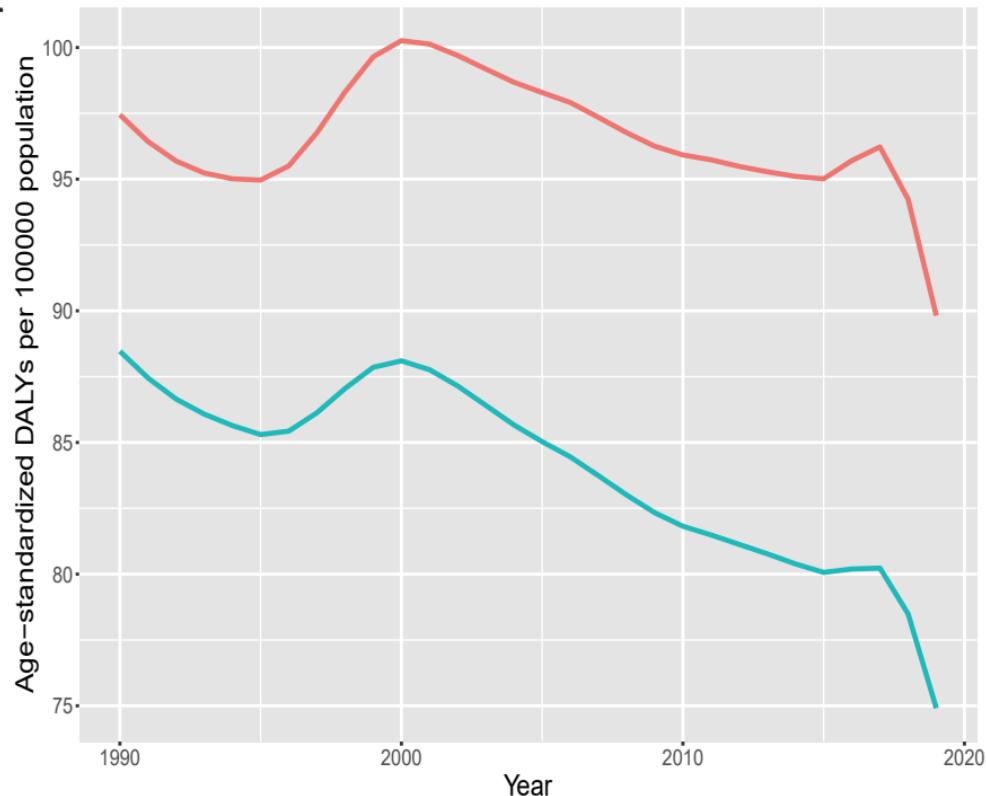

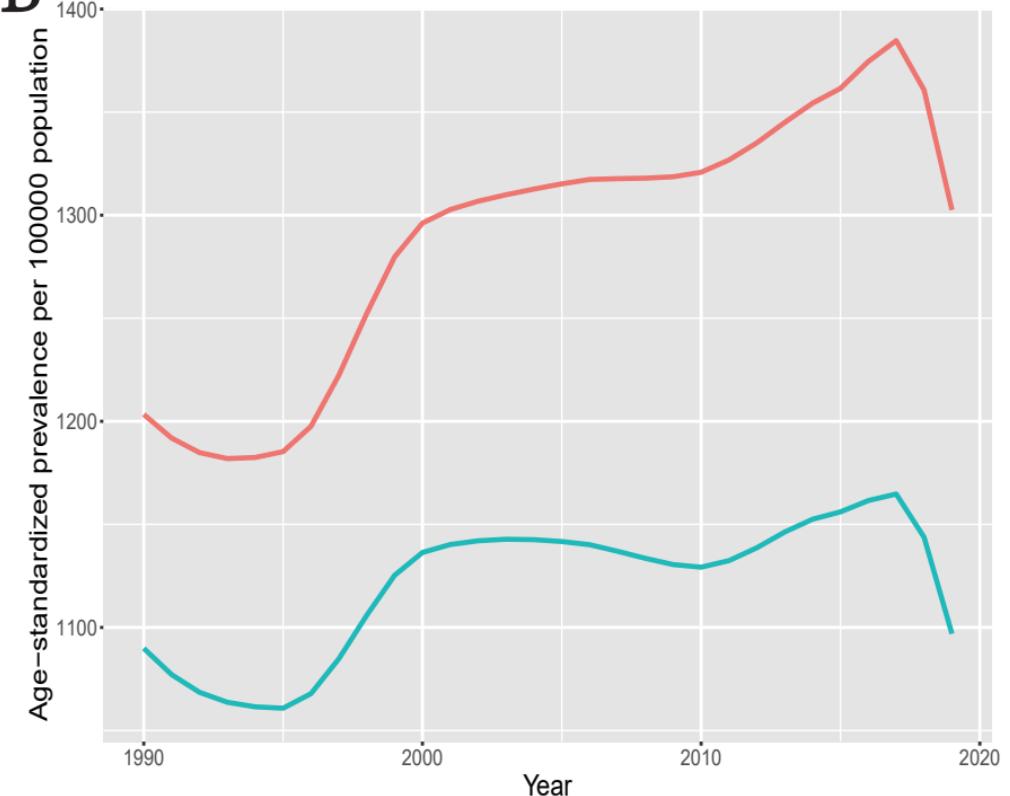

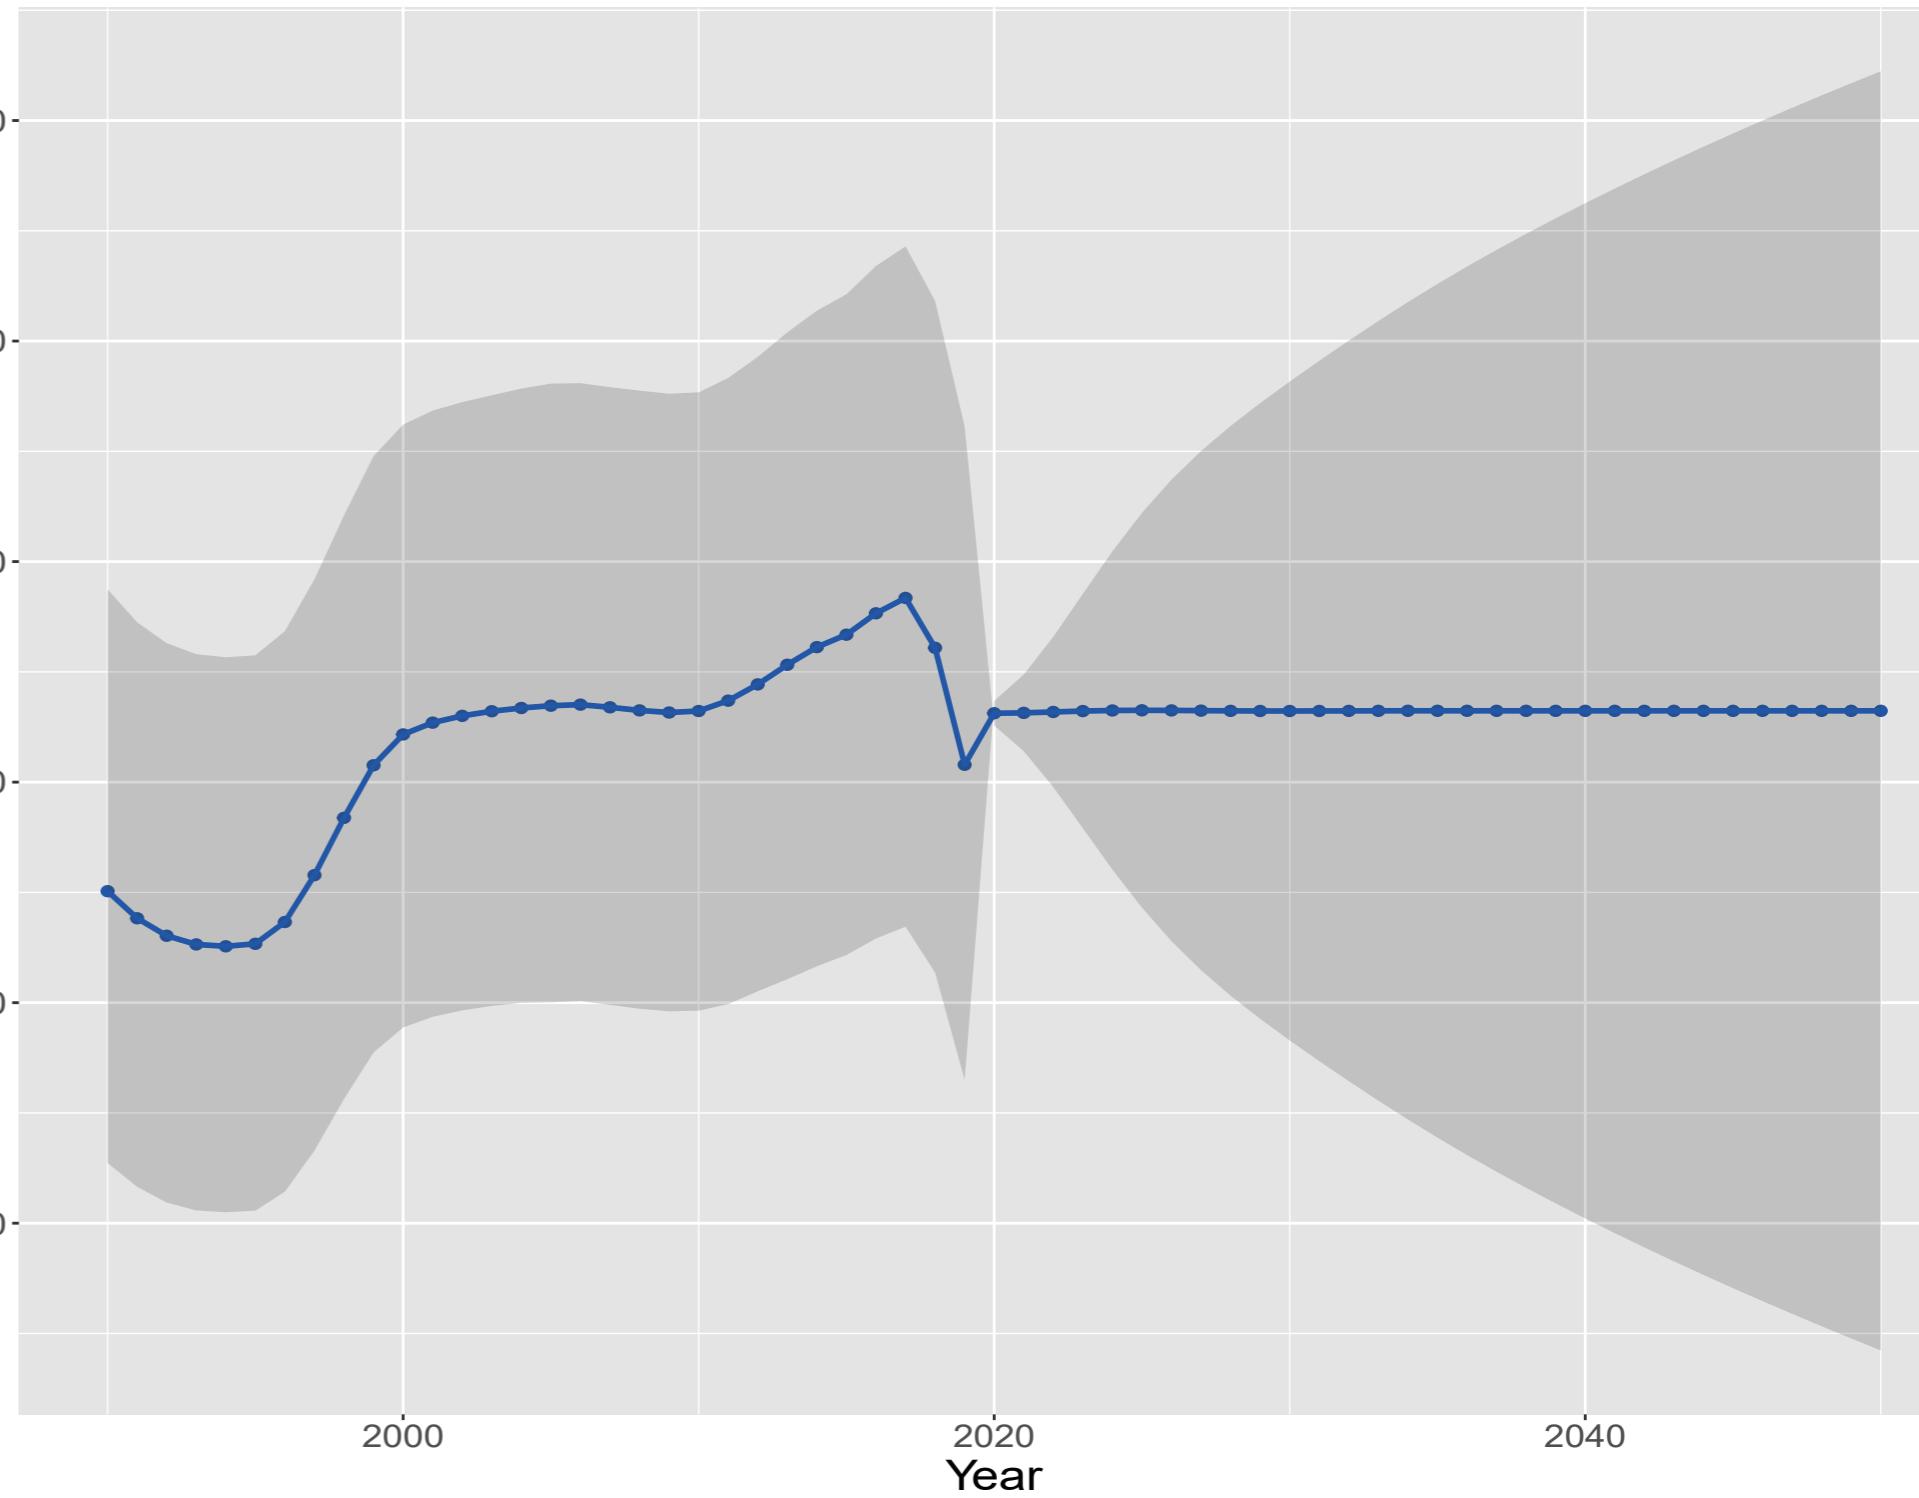

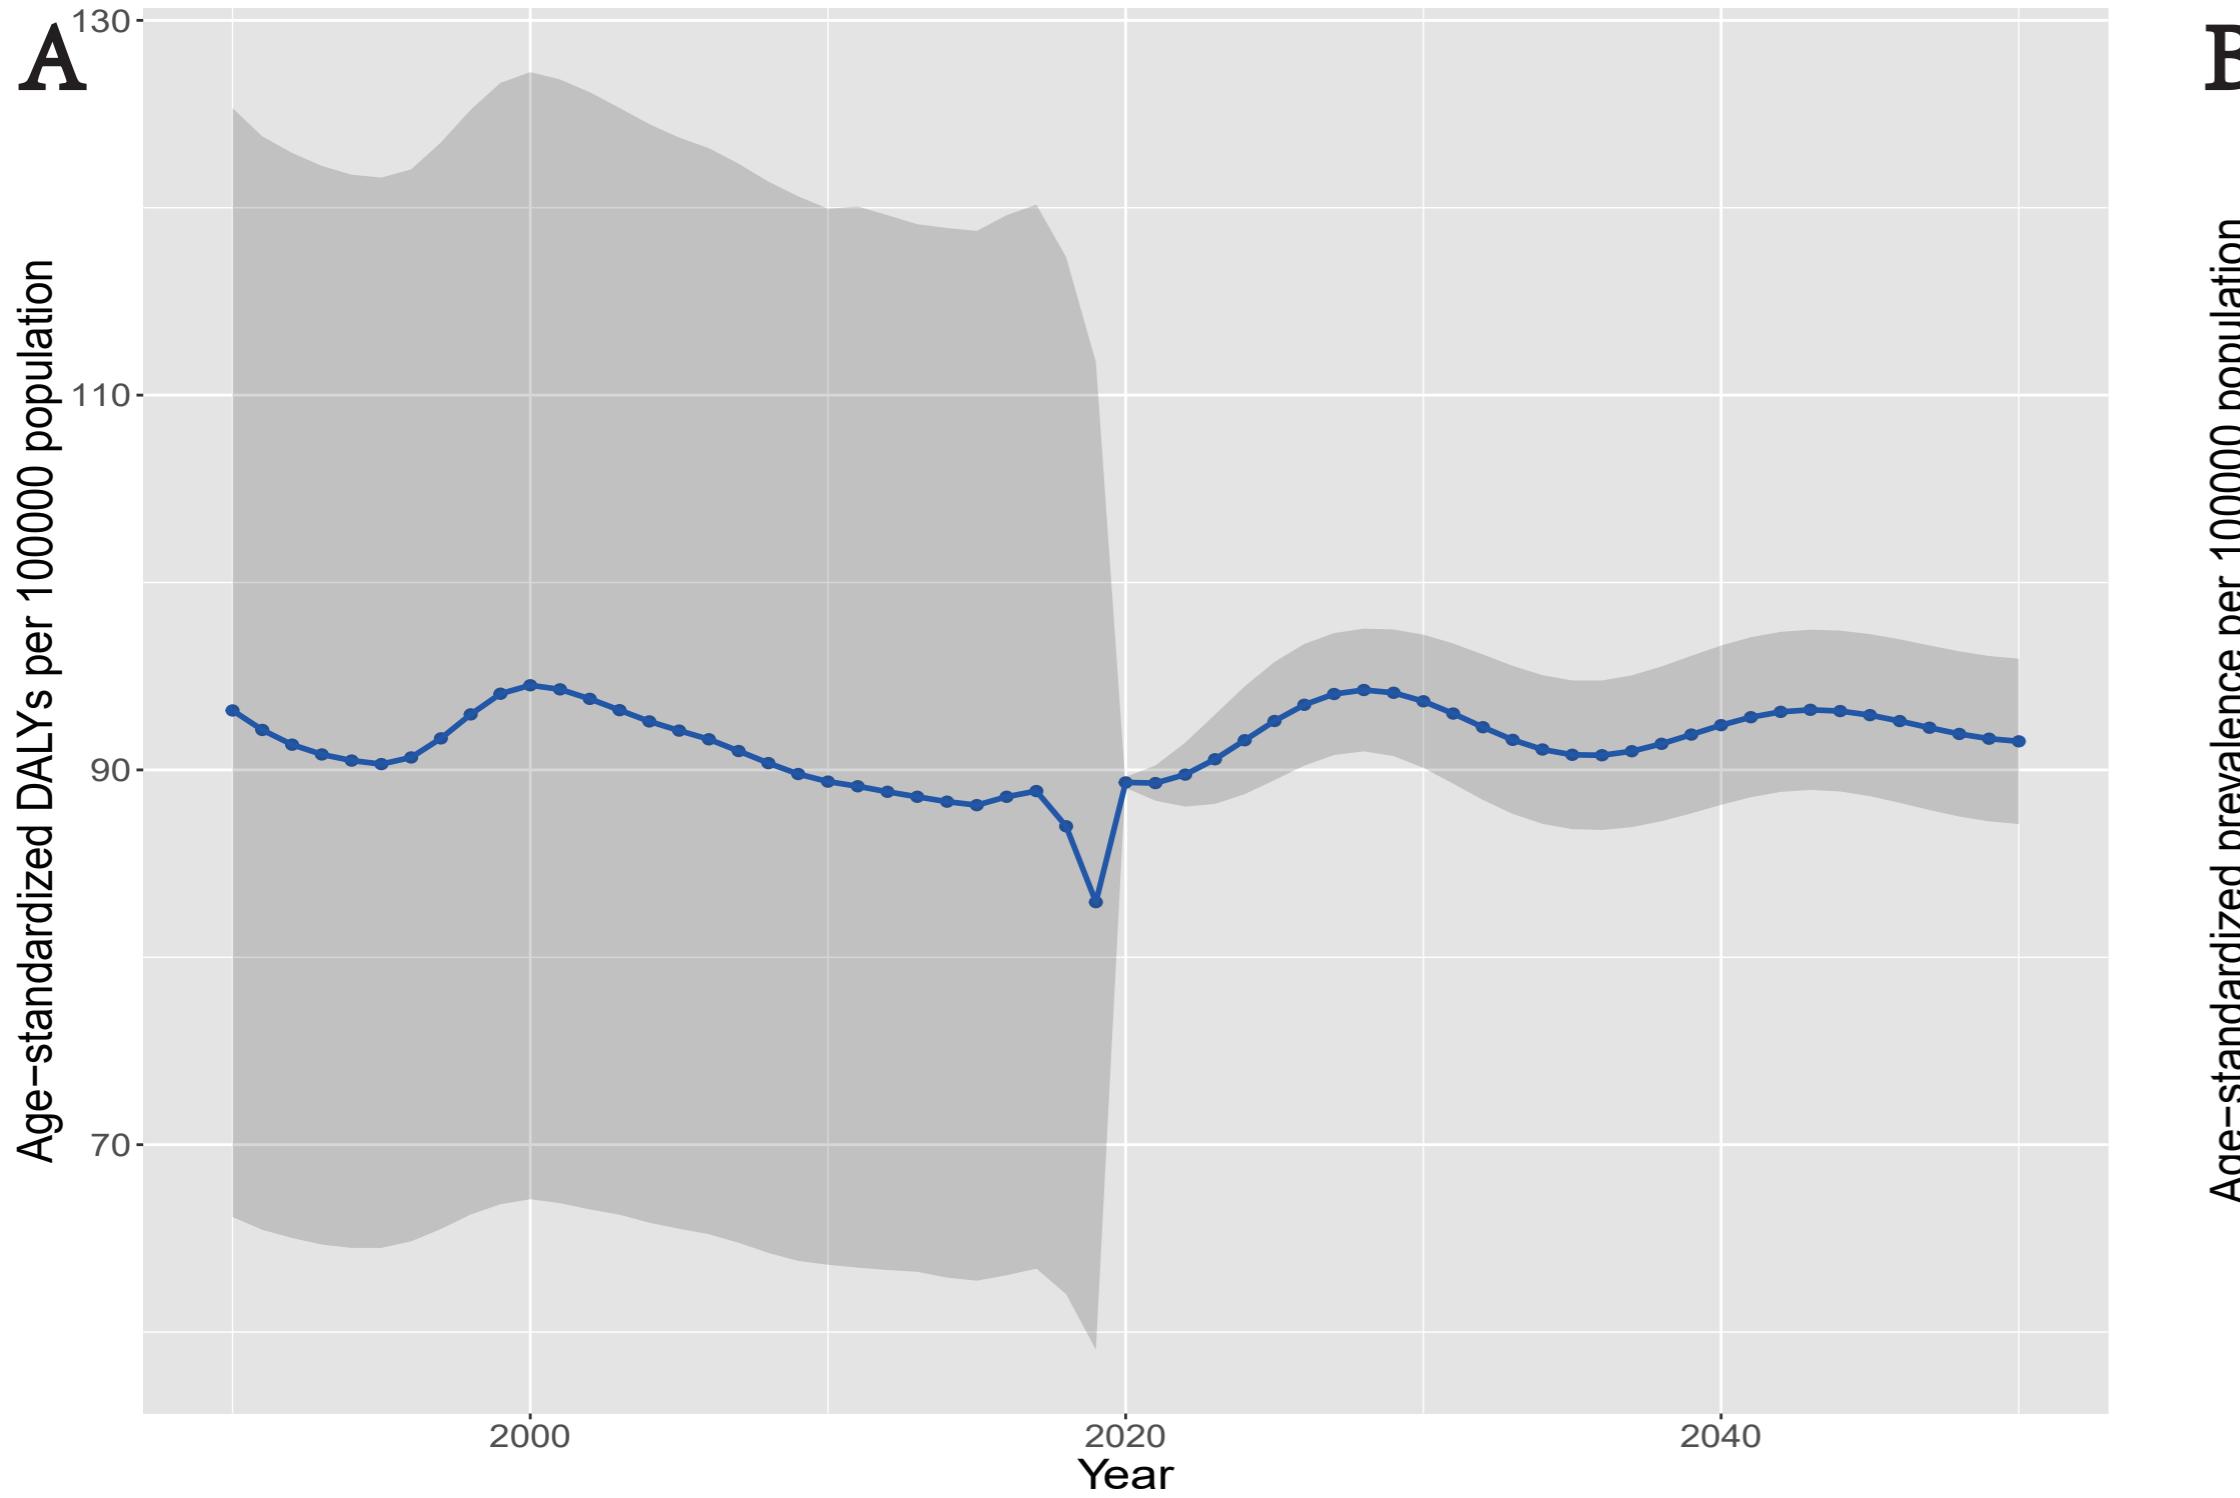

FigureS1

Trends in global burden of cataracts in terms of prevalence numbers (A), crude prevalence rates (B), and age-standardized prevalence rates (C), from 1990 to 2019. Shaded areas represent 95% uncertainty intervals. DALYs = disability-adjusted life years

A**Global DALYs rate of Cataract****B****Global prevalence rate of Cataract**

FigureS2

The persistence of gender inequality in global burden of cataracts from 1990 to 2019, in terms of age-standardized DALY rates (A), and age-standardized prevalence rates (B). DALYs=disability-adjusted life years.

FigureS3

Global burden of cataracts from 1990 to 2050 in terms of age-standardized DALY rates (A), and age-standardized prevalence rates (B). Shaded areas represent 95% uncertainty intervals. DALYs = disability-adjusted life years.
