## The first Danish family reported with an AQP5 mutation presenting diffuse non-epidermolytic palmoplantar keratoderma of Bothnian type, hyperhidrosis and frequent Corynebacterium infections: a case report

Additional file 1

Figure S1. Genetic test results of the proband. Bidirectional Sanger sequencing of the AQP5 gene.

Sequence trace showing C to T substitution; the upper trace shows the normal sequence and the lower trace is from the patient:

Translation of AQP5 gene with the mutated residue circled in red:

## Variation summary

| Variation | Genotype     | Exon | Predicted change |
|-----------|--------------|------|------------------|
| c.562C>T  | Heterozygous | 3    | p.Arg188Cys      |

## Comments

The patient was heterozygous for the single nucleotide mutation c.562C>T in exon 3 of the AQP5 gene, predicted to cause a missense change, p.Arg188Cys, at the protein level (Blaydon *et al.* (2013) AJHG 93(2):330-5.).
