

Table 4: Result of multiple regression analysis on factors affecting FSW's STI treatment-seeking behaviour (N=296)

Variables	No. (%)	Odds Ratio	95% CI	Significance
1.Age				
Below 25	119(63.9)	1.00	0.830-2.225	0.223
Above 25	177(74.7)	1.359		
2. Education				
Illiterate	98(68.8)	1.00	0.764-1.890	0.370
Literate	198(70.5)	1.202		
3.Marital status				
Never married	65(55.6)	1.00		
Separated/divorced/widow	59(72.8)	2.877	1.756-4.713	0.001
Married	172(75.8)	2.473	1.320-4.634	0.005
4. Type of sex workers				
Establishment-based	71(60.7)	1.00	1.217-3.117	0.004
Street-based	83(73.1)	1.948		
5.Perceived health worker discrimination in STI treatment				
Yes	142(67.6)	1.00	0.540-1.284	0.425
No	154(71.6)	0.833		

OR=Odds Ratio, CI= Confidence Interval
