

All VA patients  $\geq 66$  years old with at least 1 AED during FY04-FY07

N = 449,269

with new AED prescriptions

N = 114,333

AED monotherapy only [defined cohort]

N = 112,096

New onset  
Epilepsy

N = 7,445

No Epilepsy

N = 104,651

Suicidality  
cases\*

Suicidality  
cases\*

for the multivariable models, a matching schema of 1:12 for the 64 suicidality cases to controls yielded a total N = 832 [matched according to study protocol in methods section]

\*Due to privacy policies, the numbers for suicidality cases are too small to report.
