Table S1. Data fields

Table S1. Data fields used in the present study.	
UK Biobank data field	Variable name
Sociodemographic characteristics	
31	Sex
738	Average total household income before tax
6138 ¹	Qualifications
21000 ¹	Ethnic background
21003	Age when attended assessment centre
22001	Genetic sex
26410	Index of Multiple Deprivation (England)
Psychosocial factors	
709 ²	Number in household
1031 ²	Frequency of friend/family visits
6160 ²	Leisure/social activities
2020 ³	Loneliness, isolation
2110 ³	Able to confide
Lifestyle factors	
864	Number of days per week walked 10+ minutes
884	Number of days per week of moderate physical activity 10+ minutes
904	Number of days per week of vigorous physical activity 10+ minutes
943	Frequency of stair climbing in last 4 weeks
1160	Sleep duration
1239	Current tobacco smoking
1558	Alcohol intake frequency
3731	Former alcohol drinker
3859	Reason former drinker stopped drinking alcohol
20116	Smoking status
22037	MET minutes per week for walking
22038	MET minutes per week for moderate activity
22039	MET minutes per week for vigorous activity
23099	Body fat percentage
23104	Body mass index (BMI)
Environmental exposures	
24003	Nitrogen dioxide air pollution; 2010
24005	Particulate matter air pollution (pm10); 2010
24006	Particulate matter air pollution (pm2.5); 2010
24024	Average 24-hour sound level of noise pollution
24500	Greenspace percentage, buffer 1000m
24503	Greenspace percentage, buffer 300m
Health indicators	
2178	Overall health rating
2188	Long-standing illness, disability of infirmity
20001 ⁴	Cancer code, self-reported
20002 ⁴	Non-cancer illness code, self-reported
Other	
53	Date of attending assessment centre
699	Length of time at current address
3140	Pregnant

Note: ¹ these variables have been further processed and categories used in the present study are described in the main body of the text. ² variables used to derive social isolation index. ³ variables used to derive loneliness index. ⁴ variables used to derive health status.

Loneliness index:

1. If the response to one question was missing, “don’t know” or “prefer not to answer” and the response to the second question was scored 0, individuals were classified as not lonely.
2. If the response to one question was missing, “don’t know” or “prefer not to answer” and the response to the second question was scored 1, individuals were classified as missing data on loneliness.
3. If responses to both questions were missing, “don’t know” or “prefer not to answer”, individuals were classified as missing data on loneliness.

Social isolation index:

1. If the response to two questions were scored 1 and the response to the third question was missing, “don’t know” or “prefer not to answer”, individuals were classified as socially isolated.
2. If two or more responses to questions were missing, “don’t know” or “prefer not to answer”, individuals were classified as missing data on social isolation.
3. If the response to two questions were scored 0 and the response to the third question was missing, “don’t know” or “prefer not to answer”, individuals were classified as not socially isolated.
4. If the response to one question was scored 0, the response to one question was scored 1 and the response to the third question was missing, “don’t know” or “prefer not to answer”, individuals were classified as missing data on social isolation.

Figure S1. Study flowchart

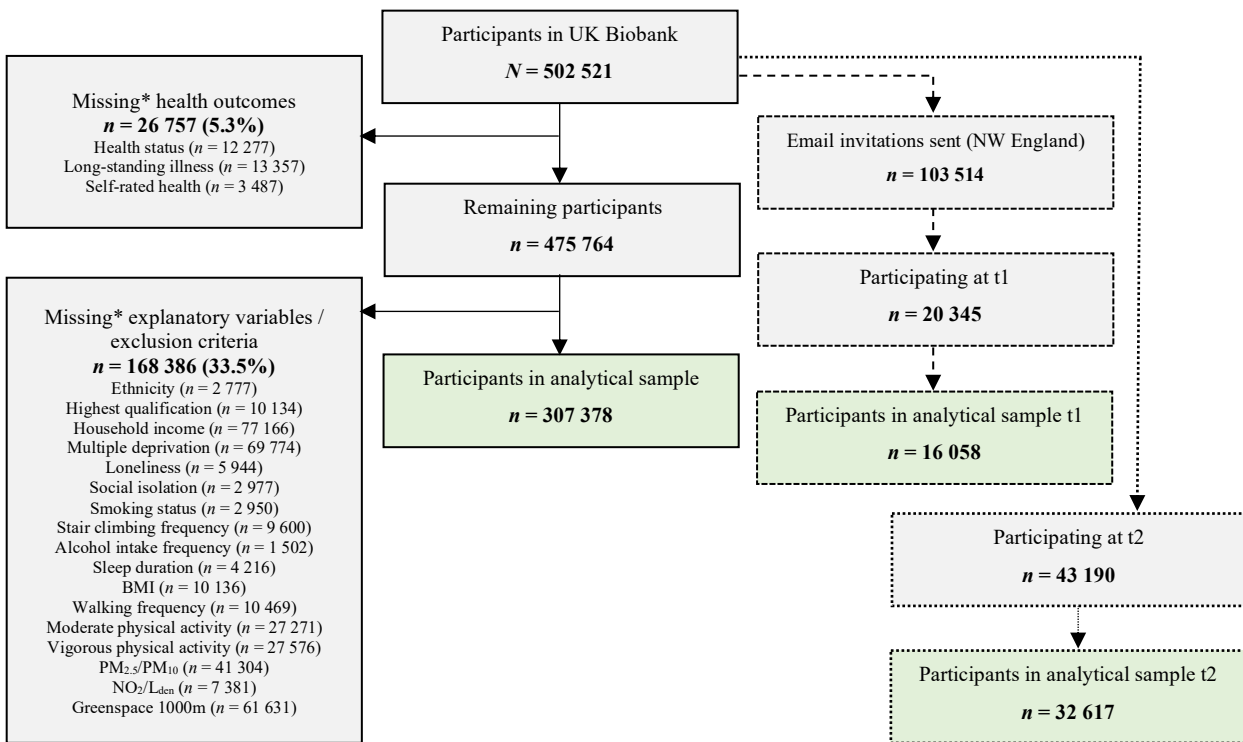

Figure S1. Flowchart of study population. t1 = follow-up during first revisit between 2012–2013; t2 = follow-up during UK Biobank Imaging Study between 2014–2019. BMI = body mass index; PM = particulate matter; NO₂ = nitrogen dioxide; L_{den} = day-evening-night noise level. *Numbers for missing data for individual variables are not mutually exclusive and include “prefer not to answer” and “do not know”.

Missing	61 631 (12.3%)	

Note: GCSEs = general certificate of secondary education; CSE = certificate of secondary education; NVQ = national vocational qualification; HND = higher national diploma; HNC = higher national certificate; BMI = body mass index; PM = particulate matter; NO₂ = nitrogen dioxide; L_{den} = day-evening-night noise level. ¹also includes 'other professional qualifications'. ²Annual household income groups: very low (<£18,000), low

(£18,000–£30,999), middle (£31,000–£51,999), high (£52,000–£100,000) and very high (>£100,000). ³number of days per week engaging in these activities for 10+ minutes continuously. ⁴*n*=498 305; ⁵*n*=492 052; ⁶*n*=475 250; ⁵*n*=474 945.

Additional information

Descriptive statistic in manuscript on duration living at current address does not include participants who lived at their current address for <1 year (*n* = 4,781), but these individuals were included in all other analyses. The average number of days between the baseline assessment and the air pollution exposure estimate (calculated based on the midpoint between 26 January 2010 and 18 January 2011) was 491 days (SD = 285; range = –56 to 1312). The corresponding figures for traffic noise were 105 days (SD = 285; range = –442 to 926).

Figures S2-S3. Self-reported illnesses

Cancer illnesses

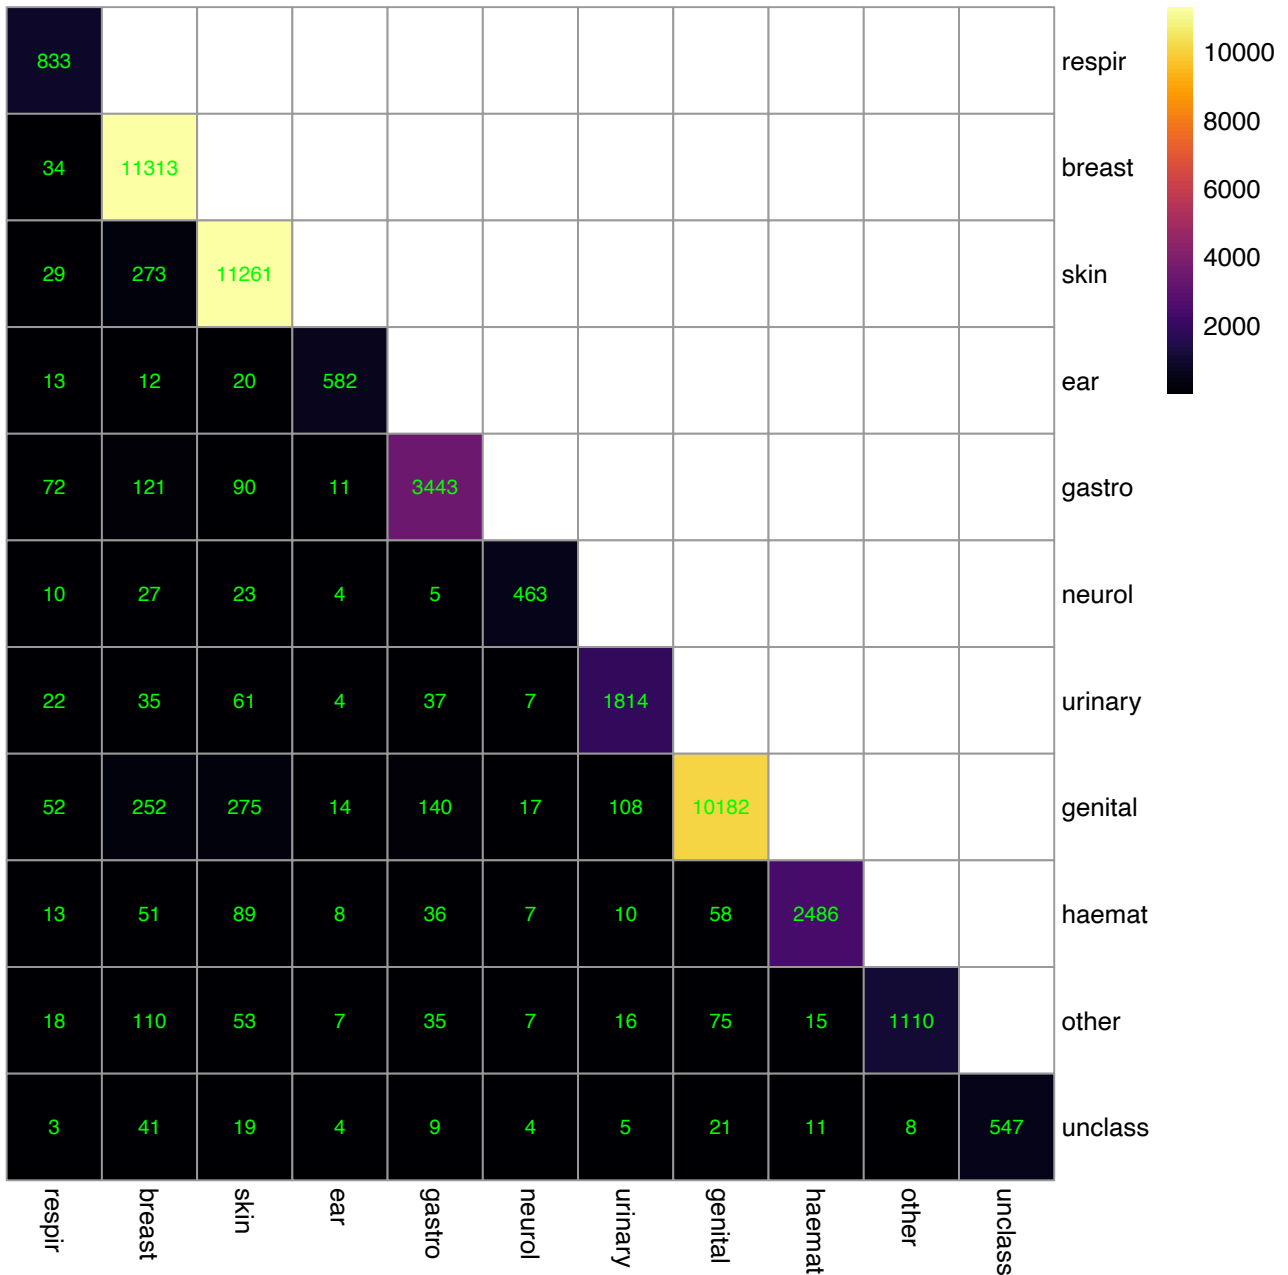

Figure S2. Self-reported cancer illnesses. Cell entries reflect the number of individuals with ≥ 1 cancer illness of the group in the corresponding row and ≥ 1 cancer illness of the group in the corresponding column (e.g. 273 participants report ≥ 1 breast cancer and ≥ 1 skin cancer). Cell entries in the diagonal reflect the number of participants with ≥ 1 cancer illness of the group in the corresponding row or column (e.g. 11 313 participants report ≥ 1 breast cancer). breast = breast cancer; skin = skin cancer; genital = genital tract cancer; gastro = gastrointestinal cancer; haemat = haematological malignancy; urinary = urinary tract cancer; other = other cancer; respir = respiratory / intrathoracic cancer; ear = ear/nose/throat cancer; neurol = neurological system cancer; unclass = unclassifiable.

Non-cancer illnesses

Figure S3. Self-reported non-cancer illnesses. Cell entries reflect the number of individuals with ≥ 1 non-cancer illness of the group in the corresponding row and ≥ 1 non-cancer illness of the group in the corresponding column (e.g. 3 712 participants report ≥ 1 cardiovascular illness and ≥ 1 infection). Cell entries in the diagonal reflect the number of participants with ≥ 1 non-cancer illness of the group in the corresponding row or column (e.g. 184 306 participants report ≥ 1 cardiovascular illness). cardio = cardiovascular; musculo = musculoskeletal/trauma; endoc = endocrine/diabetes; immuno = immunological/systemic disorders; haemat = haematology/dermatology; gynaec = gynaecology/breast; renal = renal/urology; infect = infections; unclass = unclassifiable; respir = respiratory/ent; gastro = gastrointestinal/abdominal; neurol = neurology/eye/psychiatry.

Note: Estimates from Model 4 (i.e. including all explanatory variables). Bonferroni-adjusted (~99.9%) confidence intervals. OR = odds ratio; CI = confidence interval; PM = particulate matter; NO₂ = nitrogen dioxide; L_{den} = day-evening-night noise level.

Figures S7-S9. Confidence interval plots health status stratified by sex

Sociodemographic and psychosocial factors

Figure S7. Sociodemographic characteristics and psychosocial factors associated with health status, stratified by sex. Confidence interval plot (odds ratio \pm Bonferroni-adjusted (~99.9%) confidence intervals) for Model 4 (i.e. including all explanatory variables). GCSEs = general certificate of secondary education. *Indicates reference group for categorical explanatory variables. Annual household income groups: very low (<£18,000), low (£18,000–£30,999), middle (£31,000–£51,999), high (£52,000–£100,000) and very high (>£100,000). 'GCSEs' also includes O levels and certificate of secondary education (CSE). 'A levels' also includes national vocational qualification (NVQ), higher national diploma (HND), higher national certificate (HNC) and 'other professional qualifications'.

Lifestyle factors

Figure S8. Lifestyle factors associated with health status, stratified by sex. Confidence interval plot (odds ratio \pm Bonferroni-adjusted (~99.9%) confidence intervals) for Model 4 (i.e. including all explanatory variables). BMI = body mass index. *Indicates reference group for categorical explanatory variables.

Environmental exposures

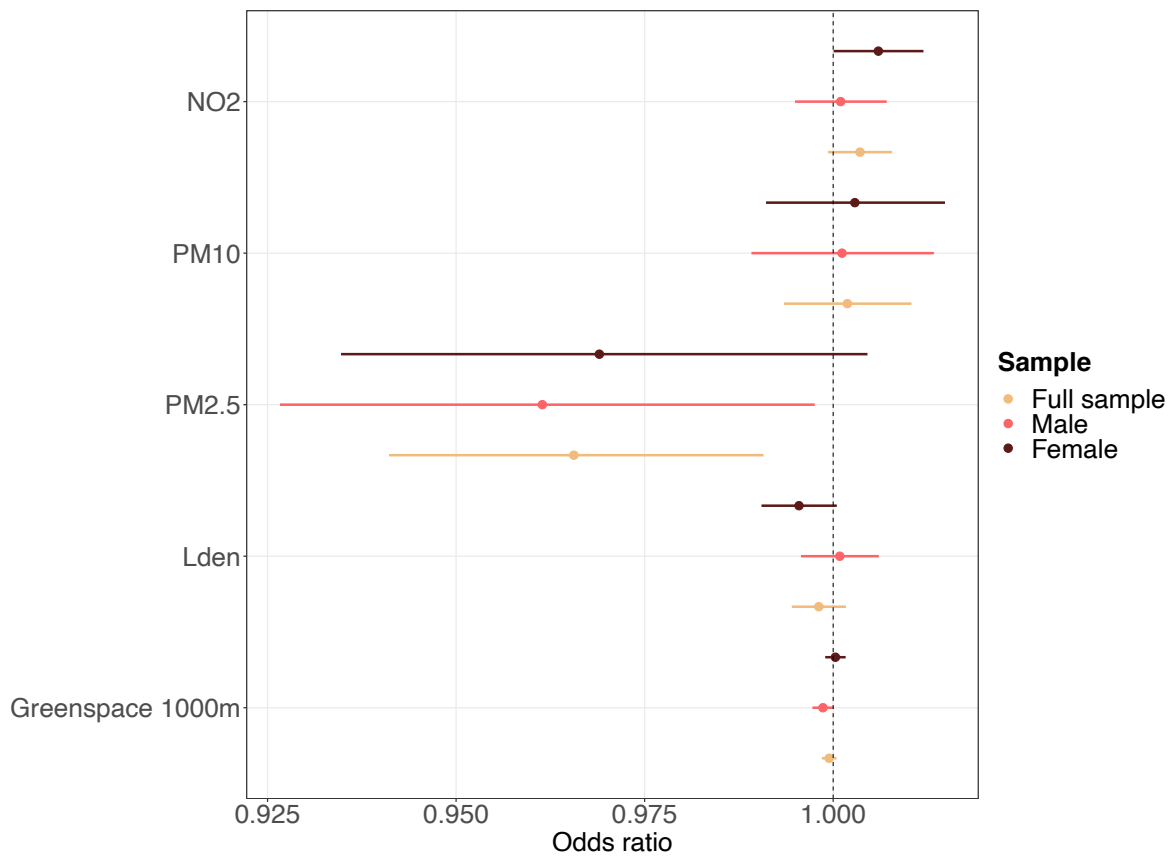

Figure S9. Environmental exposures associated with health status, stratified by sex. Confidence interval plot (odds ratio \pm Bonferroni-adjusted ($\sim 99.9\%$) confidence intervals) for Model 4 (i.e. including all explanatory variables). PM = particulate matter; NO₂ = nitrogen dioxide; L_{den} = day-evening-night noise level.

Figures S10-S12. Confidence interval plots health status stratified by age

Sociodemographic and psychosocial factors

Figure S10. Sociodemographic characteristics and psychosocial factors associated with health status, stratified by age. Confidence interval plot (odds ratio \pm Bonferroni-adjusted (~99.9%) confidence intervals) for Model 4 (i.e. including all explanatory variables). GCSEs = general certificate of secondary education. *Indicates reference group for categorical explanatory variables. Annual household income groups: very low (<£18,000), low (£18,000–£30,999), middle (£31,000–£51,999), high (£52,000–£100,000) and very high (>£100,000). 'GCSEs' also includes O levels and certificate of secondary education (CSE). 'A levels' also includes national vocational qualification (NVQ), higher national diploma (HND), higher national certificate (HNC) and 'other professional qualifications'.

Lifestyle factors

Figure S11. Lifestyle factors associated with health status, stratified by age. Confidence interval plot (odds ratio \pm Bonferroni-adjusted (~99.9%) confidence intervals) for Model 4 (i.e. including all explanatory variables). BMI = body mass index. *Indicates reference group for categorical explanatory variables.

Environmental exposures

Figure S12. Environmental exposures associated with health status, stratified by age. Confidence interval plot (odds ratio \pm Bonferroni-adjusted (~99.9%) confidence intervals) for Model 4 (i.e. including all explanatory variables). PM = particulate matter; NO₂ = nitrogen dioxide; L_{den} = day-evening-night noise level.

Sociodemographic and psychosocial factors

Figure S16. Sociodemographic characteristics and psychosocial factors associated with long-standing illness, stratified by age. Confidence interval plot (odds ratio \pm Bonferroni-adjusted (~99.9%) confidence intervals) for Model 4 (i.e. including all explanatory variables). GCSEs = general certificate of secondary education. *Indicates reference group for categorical explanatory variables. Annual household income groups: very low (<£18,000), low (£18,000–£30,999), middle (£31,000–£51,999), high (£52,000–£100,000) and very high (>£100,000). 'GCSEs' also includes O levels and certificate of secondary education (CSE). 'A levels' also includes national vocational qualification (NVQ), higher national diploma (HND), higher national certificate (HNC) and 'other professional qualifications'.

Lifestyle factors

Figure S17. Lifestyle factors associated with long-standing illness, stratified by age. Confidence interval plot (odds ratio \pm Bonferroni-adjusted (~99.9%) confidence intervals) for Model 4 (i.e. including all explanatory variables). BMI = body mass index. *Indicates reference group for categorical explanatory variables.

Environmental exposures

Figure S18. Environmental exposures associated with long-standing illness, stratified by age. Confidence interval plot (odds ratio \pm Bonferroni-adjusted (~99.9%) confidence intervals) for Model 4 (i.e. including all explanatory variables). PM = particulate matter; NO₂ = nitrogen dioxide; L_{den} = day-evening-night noise level.

Note: Estimates from Model 4 (i.e. including all explanatory variables). Bonferroni-adjusted (~99.9%) confidence intervals. OR = odds ratio; CI = confidence interval; PM = particulate matter; NO₂ = nitrogen dioxide; L_{den} = day-evening-night noise level. Odds ratios indicate proportional odds ratios for a 1-unit increase in the explanatory variable on level of self-rated health.

Figures S22-S24. Confidence interval plots self-rated health stratified by age

Sociodemographic and psychosocial factors

Figure S22. Sociodemographic characteristics and psychosocial factors associated with self-rated health, stratified by age. Confidence interval plot (odds ratio \pm Bonferroni-adjusted (~99.9%) confidence intervals) for Model 4 (i.e. including all explanatory variables). GCSEs = general certificate of secondary education. *Indicates reference group for categorical explanatory variables. Annual household income groups: very low (<£18,000), low (£18,000–£30,999), middle (£31,000–£51,999), high (£52,000–£100,000) and very high (>£100,000). 'GCSEs' also includes O levels and certificate of secondary education (CSE). 'A levels' also includes national vocational qualification (NVQ), higher national diploma (HND), higher national certificate (HNC) and 'other professional qualifications'.

Lifestyle factors

Figure S23. Lifestyle factors associated with self-rated health, stratified by age. Confidence interval plot (odds ratio \pm Bonferroni-adjusted (~99.9%) confidence intervals) for Model 4 (i.e. including all explanatory variables). BMI = body mass index. *Indicates reference group for categorical explanatory variables.

Environmental exposures

Figure S24. Environmental exposures associated with self-rated health, stratified by age. Confidence interval plot (odds ratio \pm Bonferroni-adjusted (~99.9%) confidence intervals) for Model 4 (i.e. including all explanatory variables). PM = particulate matter; NO₂ = nitrogen dioxide; L_{den} = day-evening-night noise level.

Table S59. Environmental exposures at baseline associated with self-rated health at t2												
Term	Model 1		Model 2			Model 3			Model 4			
	OR	Bonferroni-corrected CI	OR	Bonferroni-corrected CI	OR	Bonferroni-corrected CI	OR	Bonferroni-corrected CI	OR	Bonferroni-corrected CI		
PM_{2.5}	0.9205	0.8889	0.9531	0.9213	0.8896	0.9540	0.9251	0.8595	0.9957	0.9855	0.9140	1.063
PM₁₀	0.9821	0.9631	1.0014	0.9825	0.9635	1.0018	1.0105	0.9872	1.0343	1.0174	0.9936	1.042
NO₂	0.9890	0.9840	0.9940	0.9891	0.9841	0.9942	0.9955	0.9834	1.0079	0.9998	0.9872	1.013
L_{den}	0.9920	0.9835	1.0006	0.9921	0.9836	1.0007	0.9978	0.9881	1.0076	0.9976	0.9878	1.008
Greenspace 1000m	1.0021	1.0004	1.0037	1.0021	1.0004	1.0037	0.9989	0.9963	1.0016	1.0004	0.9978	1.003

Note: Bonferroni-adjusted (~99.9%) confidence intervals. OR = odds ratio; CI = confidence interval; PM = particulate matter; NO₂ = nitrogen dioxide; L_{den} = day-evening-night noise level. Odds ratios for continuous explanatory variables indicate proportional odds ratios for a 1-unit increase in the explanatory variable on level of self-rated health.

Model 1 – only individual explanatory variables.

Model 2 – adjusted for age and sex.

Model 3 – age, sex and all environmental exposures.

Model 4 – all explanatory variables.

*All models adjusted for number of days between t0 and t2.

Table S60. Descriptive statistics additional analyses

Descriptive statistics

Table S60. Descriptive statistics additional analyses	
Variable	Statistics
Body fat percentage	Mean (SD) 30.85 (8.46) Range 5-65.2
Alcohol intake frequency	<i>n</i> (%)
Lifetime abstainers	10 599 (3.45)
Current abstainers	9 792 (3.19)
Special occasions	31 526 (10.26)
1-3/month	33 798 (11.00)
1-2/week	78 777 (25.63)
3-4/week	75 251 (24.48)
Daily/almost daily	67 603 (22.00)
Current tobacco smoking	<i>n</i> (%)
“Yes, on most or all days”	21 778 (7.09)
“Only occasionally”	8 487 (2.76)
“No”	277 107 (90.15)
Metabolic Equivalent Task minutes/week	Median (IQR)
Walking	693 (1089)
Moderate activity	480 (1080)
Vigorous activity	240 (960)
PM_{2.5}	<i>n</i> (%)
≤10 µg/m ³	167 631 (54.54)
>10 µg/m ³	139 747 (45.46)
PM₁₀	<i>n</i> (%)
≤20 µg/m ³	290 684 (94.57)
>20 µg/m ³	16 694 (5.43)
NO₂	<i>n</i> (%)
≤40 µg/m ³	294 402 (95.78)
>40 µg/m ³	12 976 (4.22)
L_{den}	<i>n</i> (%)
≤53 decibels	61 017 (19.85)
>53 decibels	246 361 (80.15)
Greenspace 300m	Mean (SD) 35.65 (23.46) Range 0.227-99.180

Note: SD = standard deviation; IQR = interquartile range; PM = particulate matter; NO₂ = nitrogen dioxide; L_{den} = day-evening-night noise level.

Figure S25. Generalised additive models

To identify potential non-linear associations between continuous explanatory variables and health status, we fitted binomial generalised additive models (presented below).

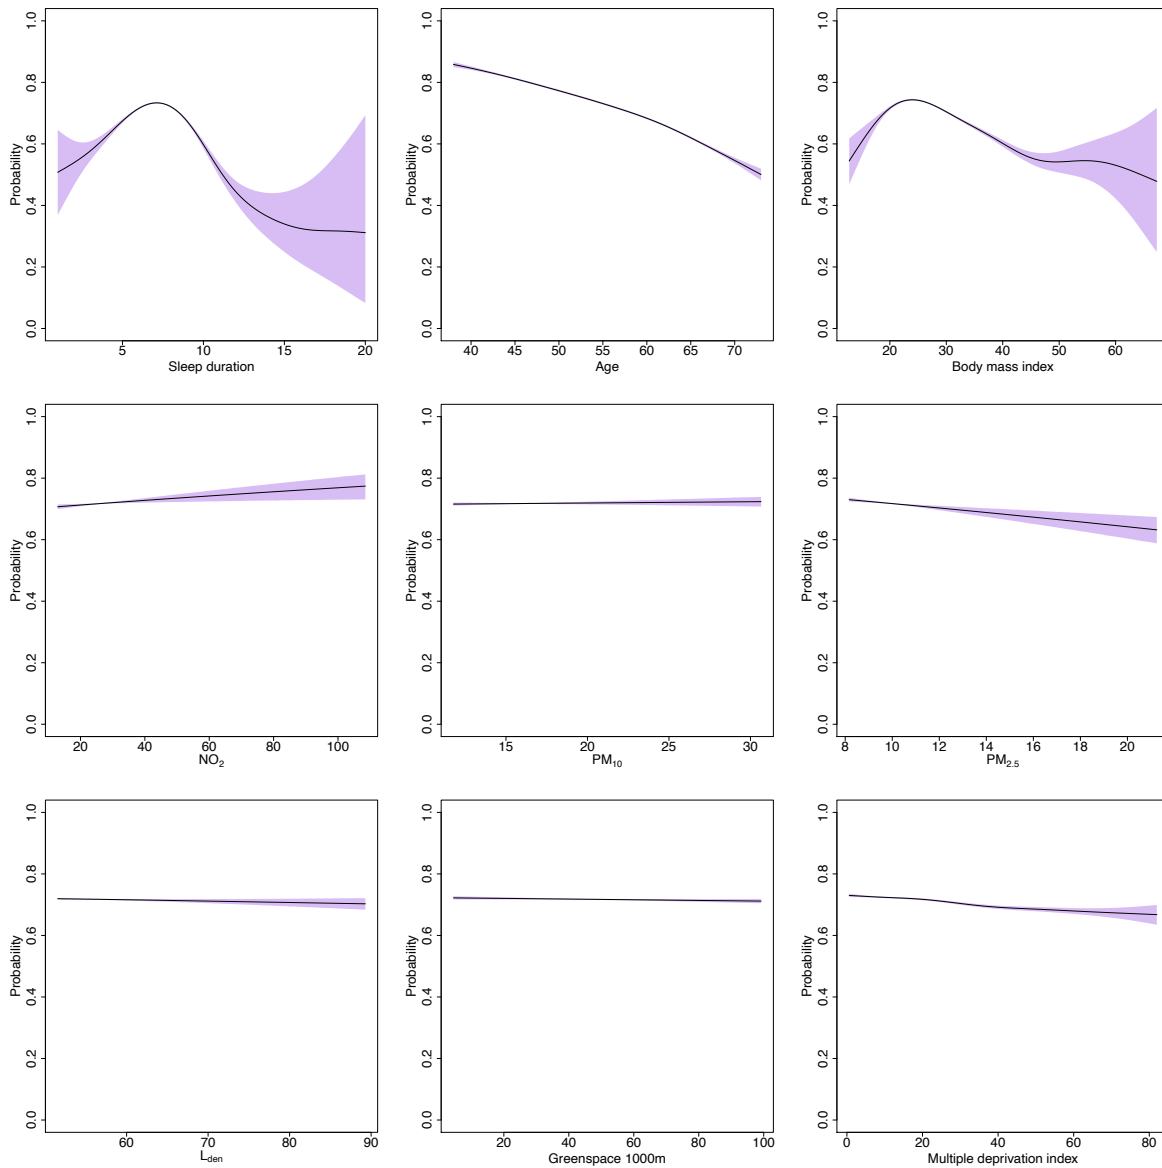

Figure S25. Probabilities of favourable health status (healthy: ≥ 0.50 ; unhealthy < 0.50) by continuous explanatory variables. Results are from a binomial generalised additive model that included all explanatory variables of the full multivariable logistic regression model (Model 4). The shaded areas correspond to approximate 95% confidence intervals ($\pm 2 \times$ standard error). L_{den} = day-evening-night noise level; PM = particulate matter; NO₂ = nitrogen dioxide.
