Fig. S2. Percentages of total iNKT (**A**) and MAIT (**B**) cells were enumerated in the peripheral blood of non-smoker and smoker populations in stable COPD patient cohort. Data present here were derived from six non-smoker and five stable COPD blood donors. Percentages of total iNKT (**C**) and MAIT (**D**) cells were enumerated in the peripheral blood of smoker populations in HC, stable COPD and AECOPD patient cohorts. Data present here were derived from five-five smoker HC, smoker stable COPD and smoker AECOPD blood donors. Boxes show interquartile ranges (IQR) whiskers represent lowest and highest values, horizontal lines indicate median.
