

Supplementary Figure S4

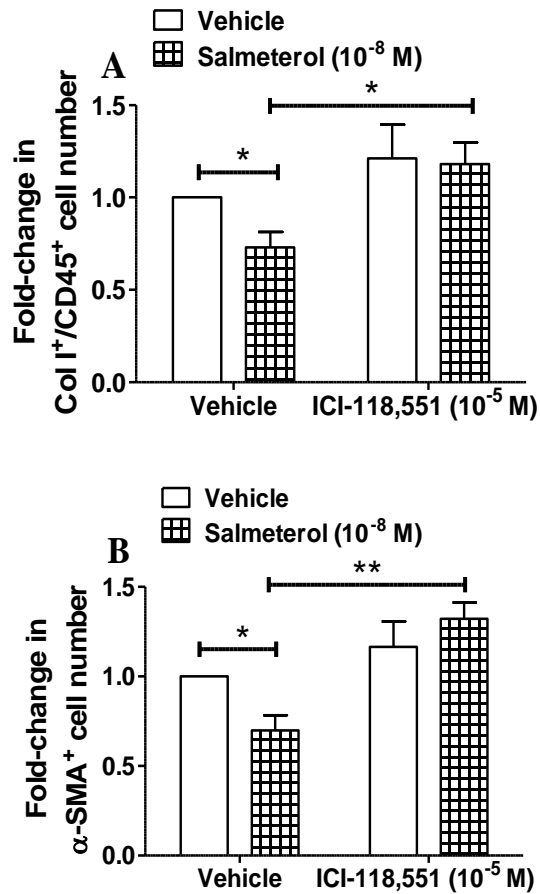

Figure S4: Effect of ICI-118,551 on salmeterol-mediated reduction in fibrocyte number and differentiation. NANT cells from healthy subjects (n=6) were treated with salmeterol (10⁻⁸M) in the presence or absence of ICI-118,551 (10⁻⁵M) for 3 days. The number of fibrocytes (Col I⁺/CD45⁺ cells; A) and differentiating fibrocytes (α -SMA⁺ cells; B) was determined. Bars represent mean \pm SEM. * $p < 0.05$ and ** $p < 0.01$.
