Figure legend

Figure S1. Scatterplots of significant correlations between baseline variables and ΔPD_{20} adenosine. ΔPD_{20} : the change from baseline to post-treatment in the provocative dose of small particle adenosine causing a 20% drop in forced expiratory volume in 1 second (FEV1). Figure S1:A shows the correlation between age and ΔPD_{20} after treatment with Clenil; Figures S1:B-D show the correlation between blood neutrophils and ΔPD_{20} after treatment with QVAR, Clenil and Flixotide, respectively; Figures S1:E show the correlation of blood eosinophils and ΔPD_{20} after treatment with Flixotide
