

Additional file 2: Figure S2. The gating strategy of CD28⁻ Treg-like cells. Phenotype of Treg-like cell subsets. (A) PBMCs or BMMCs were gated on FSC, SSC and analyzed for lymphocytes. (B) Percentages of CD4⁺ T cells gated on CD4 and SSC. (C) Percentages of CD4⁺FOXP3⁺ cells gated on FoxP3 and SSC. (D) Percentages of CD4⁺CD28⁻FOXP3⁺ cells gated on CD28 and FSC. Representative dot plots are shown for an untreated MM patient.
