

Quality-assured ACT	ACTs that either have been pre-qualified by the WHO or appear in UNICEF procurement records. This category of ACT is considered to meet international quality standards.
Non-artemisinin monotherapy	This includes monotherapies that do not contain artemisinin, such as amodiaquine, chloroquine, halofatrine, quinine, sulfadoxine-pyrimethamine, etc.
Oral artemisinin monotherapy	All oral formulations of artemisinin monotherapy – which WHO recommended be banned due to the effect on artemisinin resistance.
Non-oral artemisinin monotherapy	Non-oral formulations of artemisinin including suppositories and injectables that are recommended by WHO for the management of severe malaria, including pre-referral treatment.
