

Nurse and laboratory
technologist visit the
school

Children enrolled in
the study pulled out of
their classroom and
taken to the screening
room

Children are registered
and nurse checks for
absentees

Children wait in the
room for 20 minutes
for RDT results.
Negative cases sent
back to their
classrooms & positive
cases retained

Laboratory
Technologist takes
finger prick blood
samples to test for
malaria parasitemia
using RDT.

Nurse takes children's
weight and
temperature

RDT positive children
fed on milk and
biscuits

Nurse provides the
first treatment dose
and observes the
children for half an
hour for any side
effects

Children are released
back to their
classrooms

Nurse returns on day
two and three to
provide third and fifth
doses

Nurse gives the
evening doses of the
drug (2nd, 4th and 6th
doses) to the parent, an
older sibling or to the
child
