

Additional file 3

Msp1/msp2/glurp genotypes found in original and culture adapted samples of 12 *P. falciparum* isolates from Cambodia.

Size of bands (in base pairs) are indicated on the Y-axis. Blue, pink and gray bars represent PCR bands detected for *msp1*, *msp2*, and *glurp*, respectively. Patterns of bars indicate *msp1* and *msp2* sub-families (see legend). * Denotes polyclonal infection in both original and culture adapted samples as evidenced by the presence of two *msp2* alleles.
