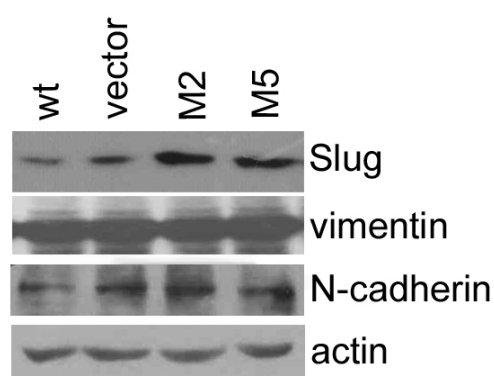

Figure S5. c-Myb upregulates Slug in MDA-MB-231MYBup cells. The nontransfected (wt), the *myb*-less vector-transfected (vector) and MYBup (M2, M5) cells were harvested. Protein extracts were resolved by SDS-PAGE and analyzed by immunoblotting with anti-Slug (9585, Cell Signaling), anti-vimentin (13.2, Sigma) and anti-N-cadherin (610920, BD Biosciences) antibodies. To control for sample loading, the blots were probed with the β -actin-specific antibody.
