

A**HTB177****B****CRL5853**

Supplementary Figure 4. Extracellular TTP, UTP, CTP, and GTP stimulate human lung cancer cells. Phosphorylation of p42/44 MAPK and AKT in the human NSCLC cell line HTB177 (**Panel A**) or the SCLC cell line CRL5853 (**Panel B**) stimulated for 5 min by the indicated nucleotides. The experiment was repeated twice, with similar results, and representative western blots are shown.
