

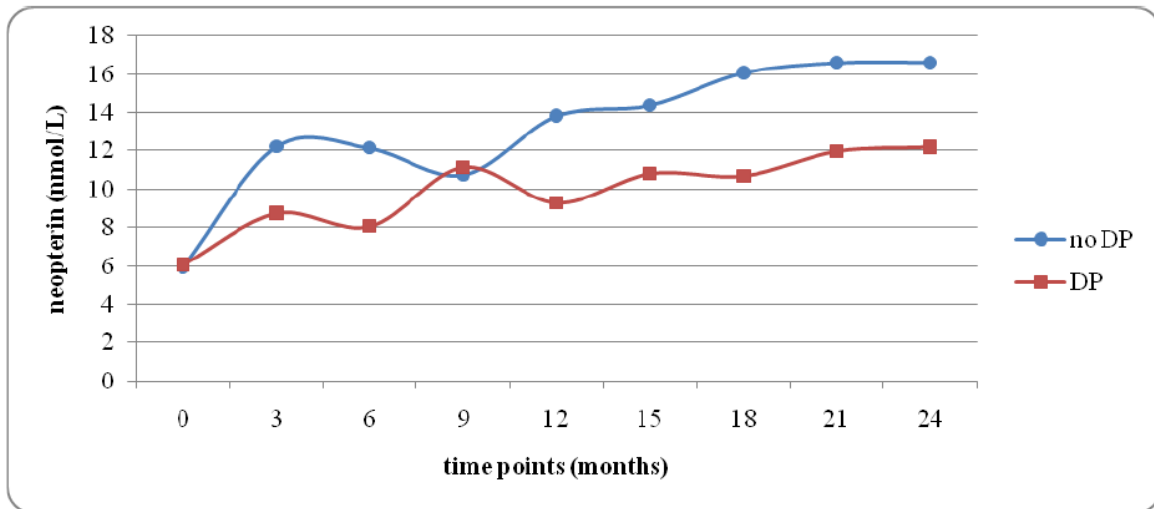

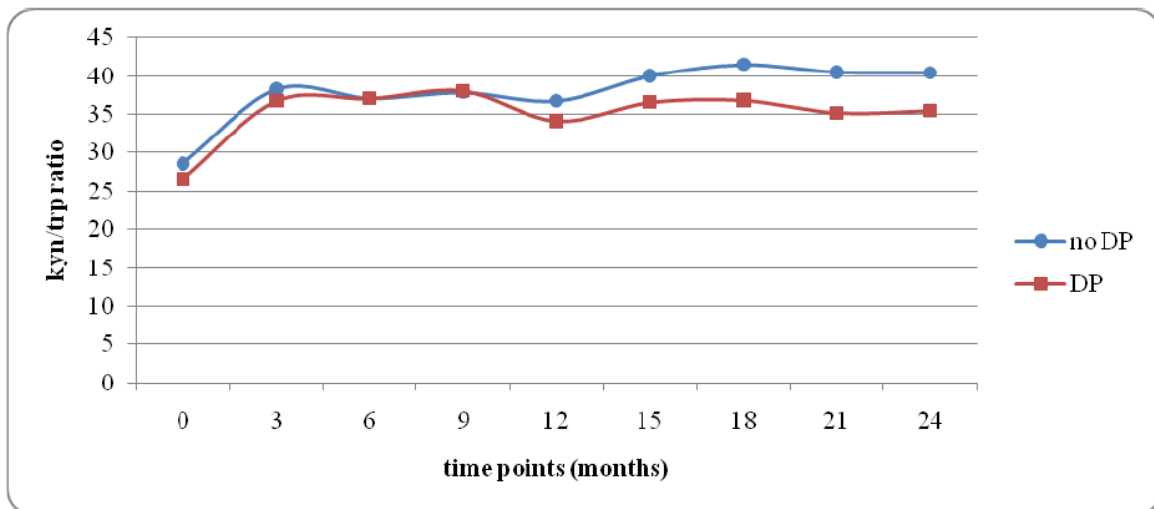

**FIGURE 3A: correlation between neopterin levels and disease progression**

**FIGURE 3B: correlation between kyn/trlp ratio and disease progression**

**Figure 3 (A and B):** No significant correlation was present between neopterin levels (A) or kyn/trlp ratio (B) and disease progression at any of the examined time points. Disease progression consisted of more than 1 point for EDSS between 0 and 5.5 and more than 0.5 point for EDSS  $\geq$ 5.5 during the treatment period (TP); DP: disease progression.
