

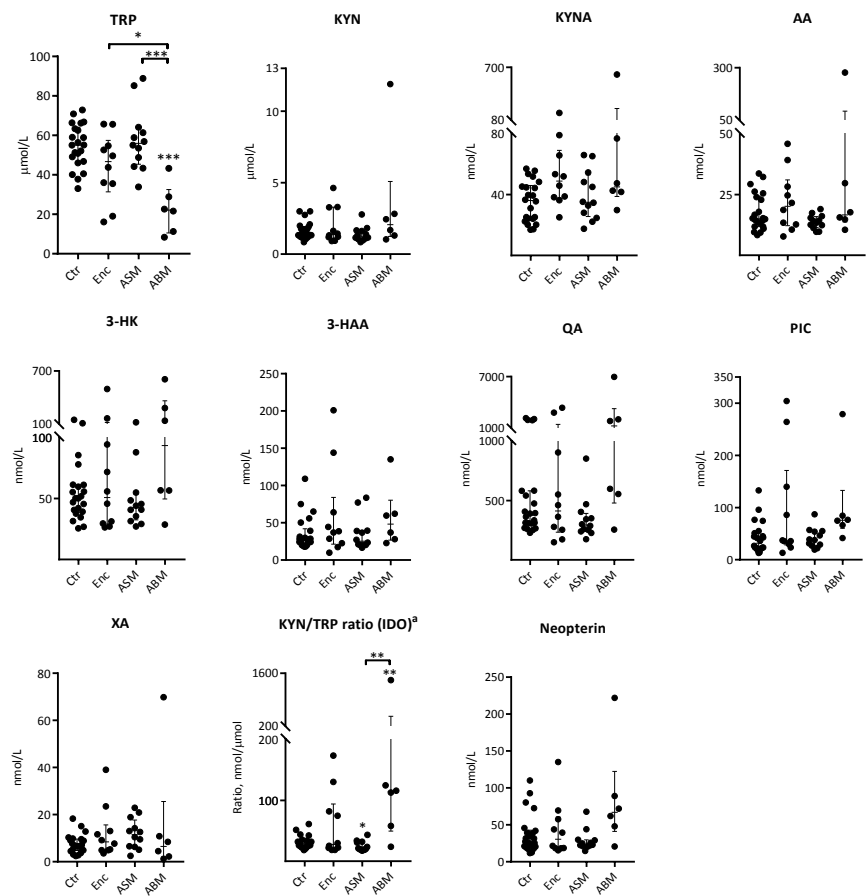

Fig. S2

Kynurenine metabolites and enzymes in serum of patients with encephalitis (Enc, n=10), viral meningitis (VM, n=12) and bacterial meningitis (ABM, n=6) in comparison with controls (Ctr, n=22). Data shown are medians with IQR. If significant in analysis of variance with the Kruskal Wallis test, comparisons of two groups were analysed by Mann-Whitney U test.

Asterisks above patient groups indicate significant difference vs controls, asterisks above horizontal lines indicate significant differences between individual groups (Mann-Whitney U tests): *p<0.05, **p<0.01 and ***p<0.001.

^a KYN/TRP ratio is calculated as KYN (nmol)/TRP(μmol)
