

Figure 1

Mason classification of radial head/neck fractures. A, Type I, nondisplaced. B, Type II, displaced partial articular fracture of $\geq 2\text{mm}$ displacement or $\geq 30\%$ of the articular surface. C, Type III, comminuted fracture. D, A type IV injury, described by Johnson²³ in 1962, indicates an associated ipsilateral ulnohumeral dislocation. Image from Terrible Triad Injury of the Elbow: Current Concepts, JAAOS March 2009 vol. 17 no. 3 137-151²⁴
