3MSCT, 3-minute stair climb test; 6MWT, 6-minute walk test; ANCOVA, analysis of covariance; FEV<sub>1</sub>, forced expiratory volume in 1 second; FVC, forced vital capacity; ITT, intent to treat; LS, least squares; MPP, modified per-protocol; MVV, maximal voluntary ventilation; uKS, urinary keratan sulfate.

<sup>a</sup>For 6MWT, the model included baseline 6MWT category (< or ≥200 m), treatment, time point, and treatment and time point interaction. For all other assessments, baseline measurement replaced baseline 6MWT category, except for 3MSCT and uKS, which included both terms.

<sup>b</sup>P values were calculated for LS mean assessments at year 2 or week 120 vs baseline.
