

Comparison of data regarding age at genetic diagnosis and SMA type

Age at genetic diagnosis / SMA type	Within the first 6 months of life	Between the age of 6 and 18 months	After the age of 18 months	Total
SMA type 1	105	42	0	147
SMA type 2	6	97	53	156
SMA type 3	0	6	81	87
Total	111	145	134	390

Data only refers to patients identified by both a neuromuscular center (information about SMA type) and a genetic institute (information about age at genetic diagnosis).
