Supp. Figure 4. The over expression of two copies of A β 42, ABri and ADan in *pdf*-neurons did not affect the circadian behavior. **A**, Percentage of rhythmic flies expressing 2 copies of amyloid peptides in *pdf* neurons at 5 and 21 days of age. The results show no differences among genotypes (bars represent the mean \pm SEM of two independent experiments). **B**, Average periods for BRI₂₋₂₃, A β 42, ABri and ADan-carrying lines. There is no difference in period values among the lines (bars represent the mean \pm SEM of two independent experiments).
