Figure S2. No correlation between weight and Pole test performance in 12-month-old mice (n as indicated in **Figure 3**). **a**) Between all mice in Bl6 background and weight ($r^2 = 0.087$, $p = 0.135$ by linear regression). **c**) Between all mice in Bl6/129sv background and weight ($r^2 = 0.015$, $p = 0.569$).
