

ADDITIONAL FILE 6: FIGURE S4

Additional file 6: Figure S4: A β aggregation status and DcR3 immuno-depletion control for the conditioned media experiment.

(a-c) Western blotting were applied to determine the aggregation state of A β peptide in (a) fresh prepared oA β or fA β , (b) after 72 hours incubating with microglia, (c) after 72 hours incubating with neuron. (d) Representative Western blotting image of DcR3 protein levels after immuno-depletion. (e) DcR3 depletion conditioned treatment had no protective function on neuronal survival under A β stress (n=4). *P \leq 0.05, ***P \leq 0.001. The neuronal survival rate of DcR3 Depletion conditioned media treatment was reduced compared to oA β /DcR3 treatment.
