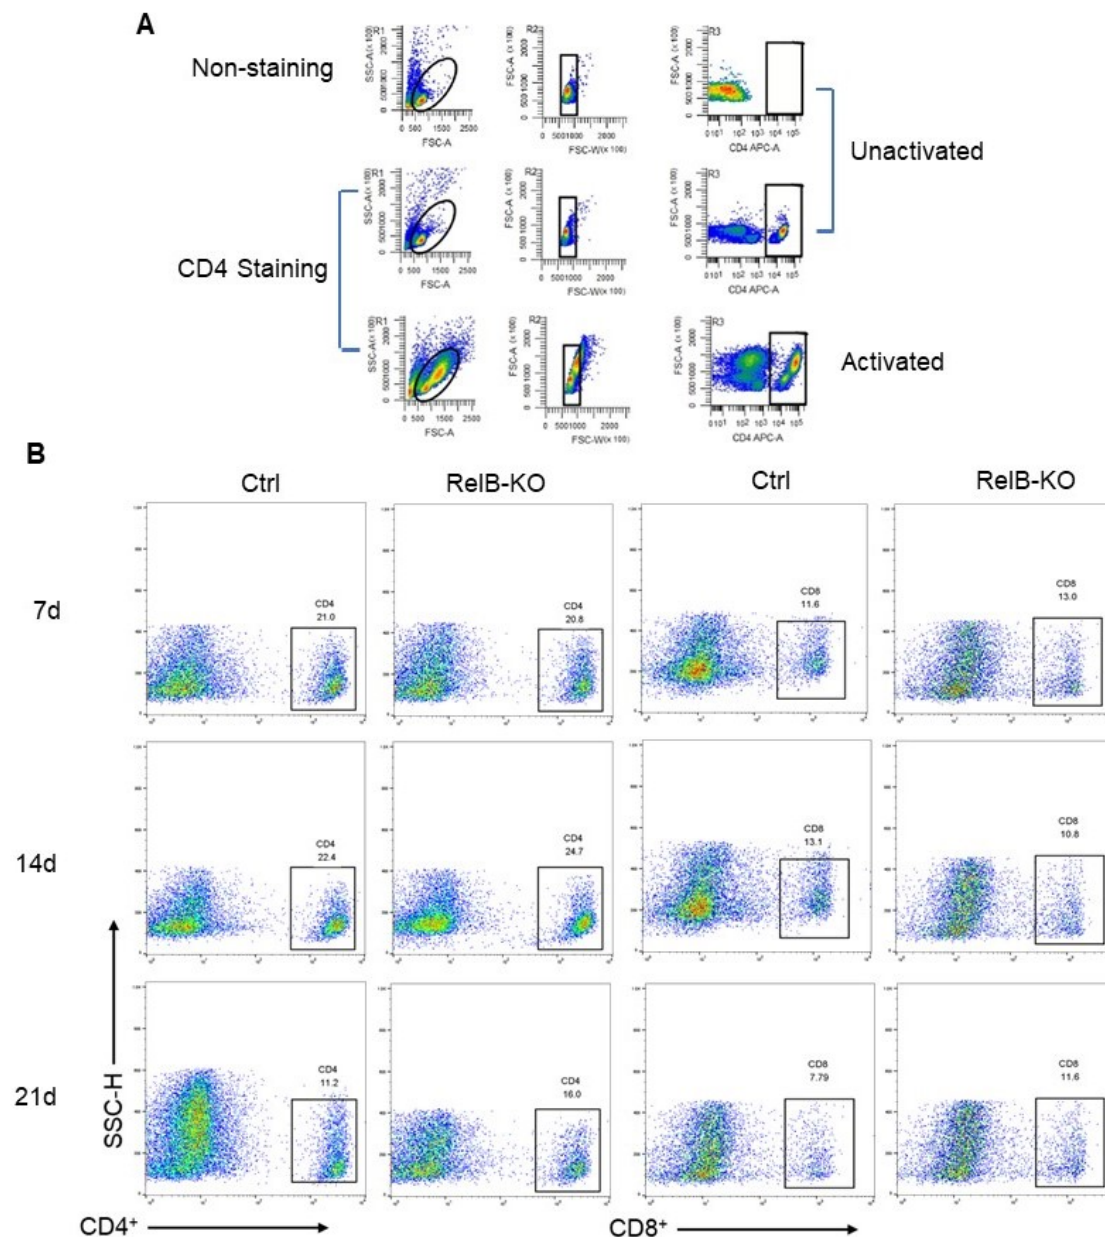

Fig. S7. Activation of mouse CD4⁺ and CD8⁺ cells by injection of RM-1 cells. **a** T cells were isolated from mouse blood samples and activated by CD3 and CD28 stimulation. The activated T cells were qualified by CD4 staining. **b** After RM-1 cell injection, blood samples were drawn from mice on different days as indicated. The fractions of CD4⁺ and CD8⁺ cells were examined by flow cytometry with relative antibodies.
