

**Table 3: Performance of Manchester Scoring method either (a) unadjusted, (b) adjusted for ER status, or (c) adjusted for ER status and PTEN status.**

Manchester Scoring Method	Cohort, n	Total BRCA1 Carriers, n	No Pathology Adjustment		With Pathology Adjustment	
			Individuals tested, n	BRCA1 carriers tested, n	Individuals tested, n	BRCA1 carriers tested, n
Adjustment + Estrogen receptor status	345	28	72	12	82	18
Adjustment + Estrogen receptor + PTEN status	26	7	5	3	10	6

Table 3 shows the predicted and observed number of BRCA1 and BRCA2 (combined) carriers in patients with low (1-14) and high Manchester score, either without adjustment for pathological features, or adjustment for ER status and other features [14-16], or further adjustment including +1 for loss of PTEN.
