Figure S1. Flow chart of eligible study population.

50,884 women aged 35-74 enrolled in the Sister Study from 2003-2009

N=81 excluded:
  - N=3 withdrew data from study
  - N=75 BC diagnosis prior to, at the same age as, or unknown relative to baseline completion
  - N=3 Uncertain BC diagnosis

50,803 women with BC outcome data

N=57 excluded:
  - N=11 age at menarche ≥22
  - N=7 never had a period
  - N=39 age at menarche unknown or missing

50,746 women with age at menarche data

N=598 excluded:
  - N=32 age at thelarche ≥21
  - N=566 age at thelarche unknown or missing

50,148 women with age at thelarche data

N=350 excluded:
  - N=217 age reached adult height ≥26
  - N=133 age reached adult height unknown or missing

49,798 women with age reached adult height data

N=112 excluded:
  - N=7 missing race/ethnicity and family income growing up
  - N=6 missing race/ethnicity only
  - N=99 missing family income growing up

49,686 women in primary analytic dataset

(97.7% of cohort)
