

Table S1. Spearman correlations between pubertal variables

	Age at thelarche	Age at menarche	Age reached adult height	Time from thelarche to menarche
Age at menarche	0.62			
Age reached adult height	0.26	0.28		
Time from thelarche to menarche	-0.44	0.36	0.01	
Time from menarche to adult height	-0.11	-0.31	0.79	-0.21

All correlations coefficients significant at $p < .0001$ except correlation between age reached adult height and time between thelarche and menarche
