Health Professional Survey

The OBLIGE research study on induction of labour has been up and running at Auckland DHB for over 6 months, and it is time to ask for your feedback about the study. It is for staff midwives and doctors at ADHB, and for Lead Maternity Carers; whether you have had several women in the study, or haven't even heard of it! By answering the following questions, we assume you consent to participate in this staff satisfaction survey. It should take only 5 minutes, and we appreciate any extra comments you wish to make. The results are anonymous. Thank you in advance for your time.

Dr Michelle Wise, Principal Investigator, OBLIGE Study Senior Lecturer, Department of Obstetrics and Gynaecology, FMHS, University of Auckland

Thank you for contributing to the OBLIGE study. We would like to ask you some questions about the impact on you of having some women start their induction with a balloon as an outpatient. Your answers will be kept strictly confidential.

I. This section refers to the practice of inducti	ion of labour using a balloon
a. In your clinical role, how has the practice of balloon induction contributed to your satisfaction:	 improved my satisfaction a lot improved my satisfaction a little no difference decreased my satisfaction a little decreased my satisfaction a lot not applicable
b. How has the practice of balloon induction affected your stress at work:	 increased my stress a lot increased my stress a little no difference decreased my stress a little decreased my stress a lot not applicable
c. How has the practice of balloon induction affected your workload:	 increased my workload a lot increased my workload a little no difference decreased my workload a little decreased my workload a lot not applicable
d. In a typical work week, roughly how many balloon inductions would you be directly involved with:	
e. Over the past 6 months, roughly how many balloon inductions were you directly involved with:	

f. How would you rate your own expe balloon induction overall:	highly experiencedsomewhat experiencednot at all experienced											
2. This section refers to the	ne pract	ice of	induct	ion of	f labou	r as ar	outp	atient				
a. In your clinical role, how has the properties outpatient induction contributed to you satisfaction at work:	improved my satisfaction a lot improved my satisfaction a little no difference decreased my satisfaction a little decreased my satisfaction a lot not applicable											
b. How has the practice of outpatient induction affected your stress at work:						 increased my stress a lot increased my stress a little no difference decreased my stress a little decreased my stress a lot not applicable 						
c. How has the practice of outpatient induction affected your workload:						increased my workload a lot increased my workload a little no difference decreased my workload a little decreased my workload a lot not applicable						
d. In a typical work week, roughly how outpatient inductions would you with:		y involv	ved									
e. Over the past 6 months, roughly he outpatient inductions were you with:		volved										
f. How would you rate your own experience with outpatient induction overall:					highly experiencedsomewhat experiencednot at all experienced							
3. To what extent do you	agree w	ith th	e follo	wing s	statem	ent:						
	Not at all satisfi ed	1	2	3	4	5	6	7	8	9	extre mely satisfi ed	
I am satisfied with my present job.	0	0	0	0	0	0	0	0	0	0	0	

	part of the OBLIGE research trial:		
Thir	ngs that I like about it		
Thir	ngs that I don't like about it		
	igo that I don't like about it		
	5. Please provide comments about recruitment fo	r the OBLIGE research trial:	
Thi	ngs that can be barriers to recruiting women		
Thiı	ngs that can help with recruiting women		

4. Please provide comments about your experience so far with outpatient balloon induction as
